Supplementary Figure 1 Illustration of cascade forest structure.

Supplementary Figure 2 The result of LASSO in identifying biomarkers of predicting AKI in discovery cohort.

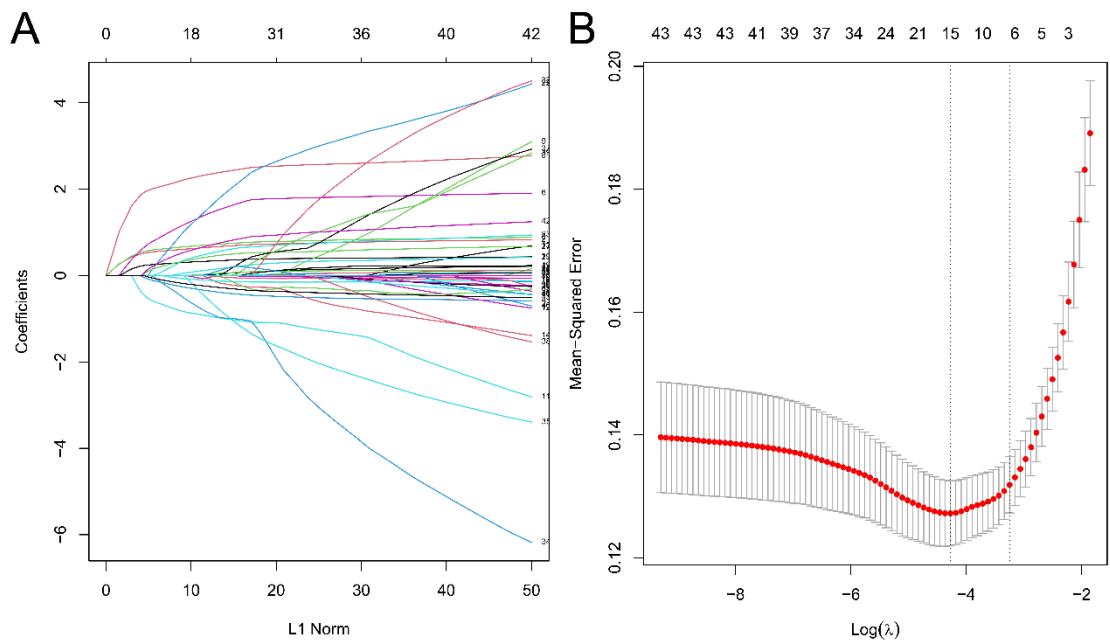

Supplementary Figure 3 The violin plot in the distribution of sST2, NT-proBNP, H-FABP, LDH, and UA among the non-AKI and AKI groups.

Supplementary Table 1 Early postoperative biomarkers among patients in the validation cohort who did or did not develop acute kidney injury.

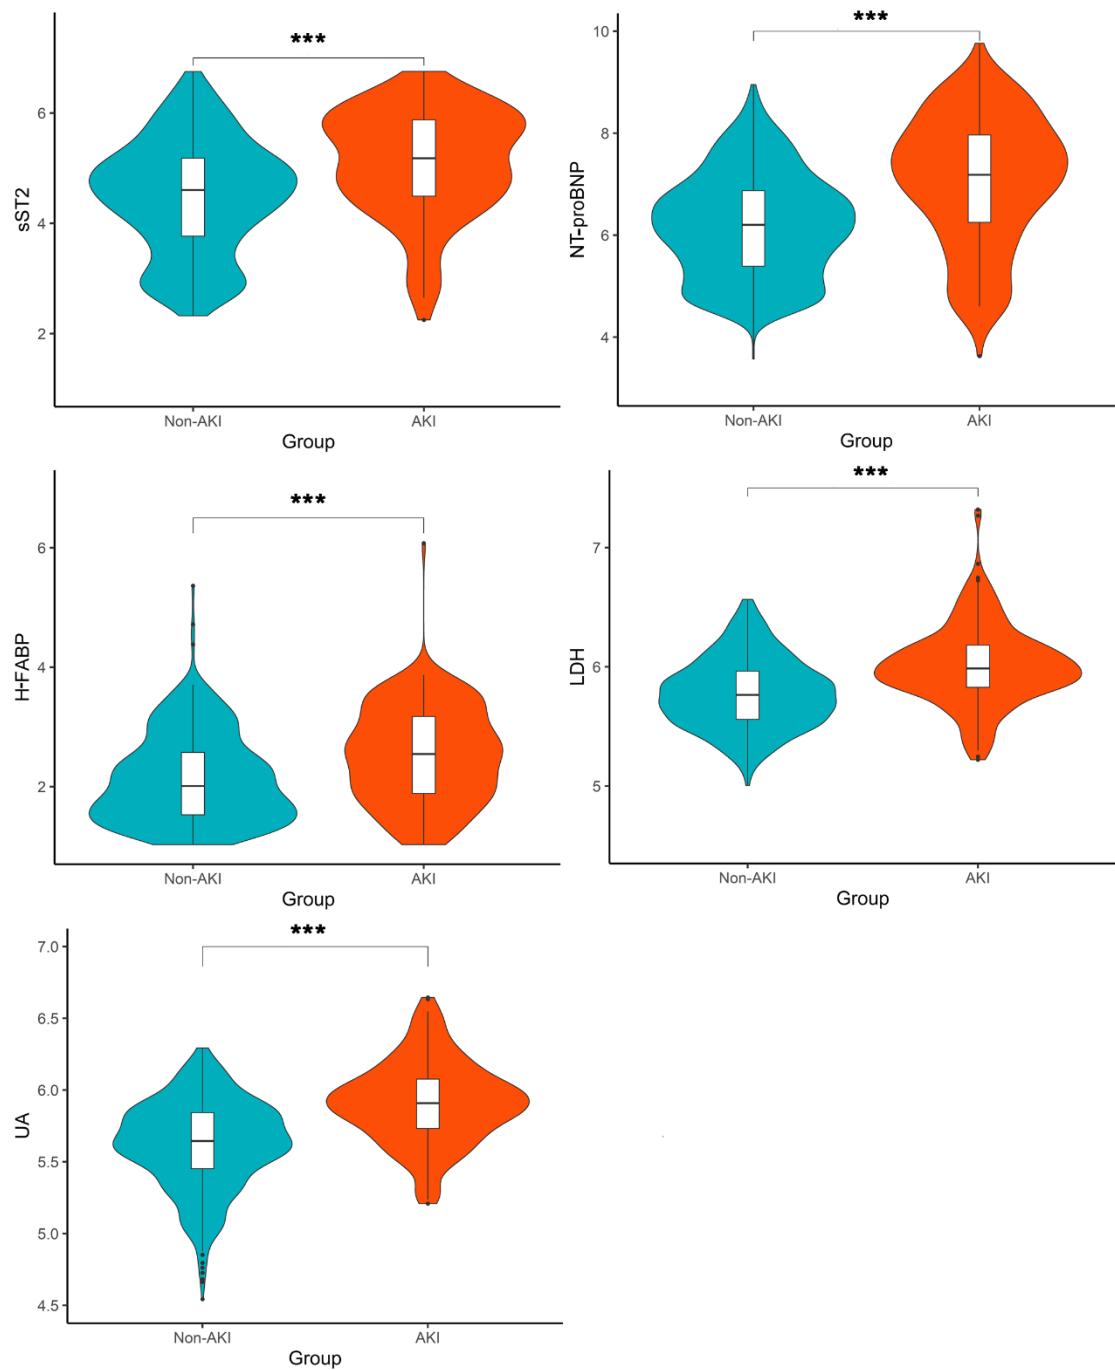

Supplementary Table 2 Percentage of missing variables for each predictor in discovery cohort.

Supplementary Figure 1 Illustration of cascade forest structure. Each level of the cascade consists of two random forests (light blue) and two extra random forests (black). Each forest outputs a two-dimensional class vector, which is then concatenated for representation of original input.

Supplementary Figure 2 The result of LASSO in identifying biomarkers of predicting AKI in discovery cohort. Variable selection using least absolute shrinkage and selection operator regression. **(A)** LASSO coefficient profiles of 43 variables. **(B)** Identification of optimal penalization coefficient (λ) using 10-fold cross-validation via optimal λ at minimum criteria and a standard error (six variables).

Supplementary Figure 3 The violin plot in the distribution of sST2, NT-proBNP, H-FABP, LDH, and UA among the non-AKI and AKI groups. Differences in biomarker concentrations were compared after pooling the two cohort together. Statistical significance was determined using the student's t-test ($***P < 0.001$). AKI, acute kidney injury; sST2, soluble ST2; NT-proBNP, N terminal pro-brain natriuretic peptide; H-FABP, heart-type fatty acid-binding protein; LDH, lactic dehydrogenase; UA, uric acid.
