

Supplementary Material

Supplementary Figure 1. Unaltered thymic development of PKD3 Δ T mice

Thymocytes from either PKD3 Δ T mice (◇) and respective controls (◆) were counted and analyzed for CD4 and CD8 expression by flow cytometry. Results are shown with a representative dot plot together with summarizing graphs showing relative proportions of CD4/8 double negative (DN), double positive (DP) and CD4 as well as CD8 single positive (SP) cells. (n = 9; from 3 independent experiments)
