Table S2 – Sources of research questions for the 2014 global oceans research priorities survey. Summary of big question, horizon scanning, and expert opinion exercises and reports on ocean research priorities, and disciplinary background, type of professional affiliation, and mean h-index for their marine-oriented co-authors only.

	Article or report details				Co-author characteristics		Disciplinary background ¹			Affiliation ²		h-index ³ of marine co-authors	Considered and used in 2014 Rudd survey ⁴	
	Regional focus	Domain	# candidate questions	Minimum # contributors	# issues or questions	Number (total)	Number (marine)	NS	SS	Other	Research	Other		
NON-MARINE FOCUSED

Supporting information S2

Footnotes: ¹ NS = natural sciences; SS = social sciences including economics; Other = engineering and applied sciences, management, professional fields, arts and humanities, health sciences, and other disciplines; ² Research = academia, government research centers, and non-profit research organizations; Other includes ENGOs, private sector, government policy and management organization, and other organizations ;³ h-index calculated using Google Scholar pages for individuals when available, or Google Scholar-based searches with Publish or Perish; ⁴ global ocean priorities survey conducted February to March 2014; ⁵ Focus was on pharmaceuticals and personal care products (PPCPs) in the environment: the only marine-focused person (Rudd) included acted in a facilitation role for the meeting; ⁶ While terrestrial in orientation, this exercise included a number of general policy-oriented questions of potential use in the marine realm; ⁷ While freshwater in orientation, this exercise included a number of coastal-oriented questions of potential use in the marine realm; ⁸ Kark et al. did not report on how many questions were solicited from their 50 contributors; ⁹ The Morton et al. study did not solicit questions from individuals but relied on experts' participation in a workshop to identify Australian issues: it is included here rather than in a separate non-marine expert opinion category; ¹⁰ A large majority of participants in this exercise were from the UK: while policy questions should have a broad common denominator internationally, it was classified as having a UK focus in this table because of its limited international participation; ¹¹ Sutherland et al. (2008) did not report how many individuals contributed to formulating the 61 candidate questions; ¹² Parsons et al. (2014) did not report how many individuals contributed to formulating the 631 candidate questions; ¹³ The Wadden Sea report had only 4 co-authors but used two broad surveys to derive these questions; ¹⁴This report was written by only a few of the workshop participants who helped shape the issues and were included in the 'co-author category here; ¹⁵ The Heip and McDonough report is essentially an executive summary of the prior 2011 report, but only contained 10 research priorities in total: as it was redundant with Heip et al. (2011), none of the questions from this exercise were retained for the Rudd 2014 survey; ¹⁶ The 2014 global ocean research priorities survey contained only 67 questions in total: the tally here shows 83 because, in some cases, wording from questions that were very closely related in topic was combined.
