

Appendix C

Descriptive statistics for exploratory analysis of the left-handed subsample

Figure C1

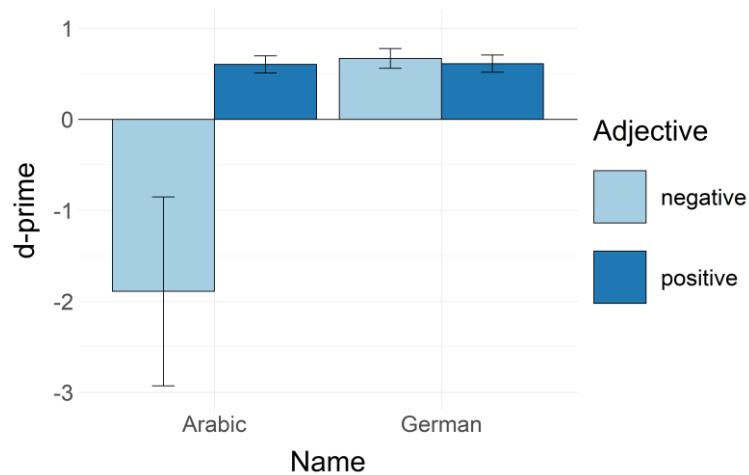

Reaction times in the SJ task aggregated by Name and Response Side (left-handers)

Note. Bars represent mean values. Whiskers represent standard errors.

Figure C2

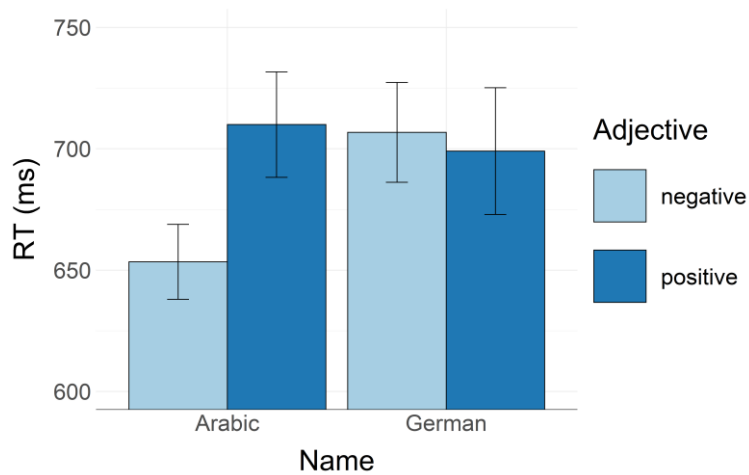

D-primes in the GNAT aggregated by Name and Adjective (left-handers)

Note. Bars represent mean values. Whiskers represent standard errors.

Figure C3

Reaction times in the GNAT aggregated by Name and Adjective (left-handers)

Note. Bars represent mean values. Whiskers represent standard errors.

Figure C4

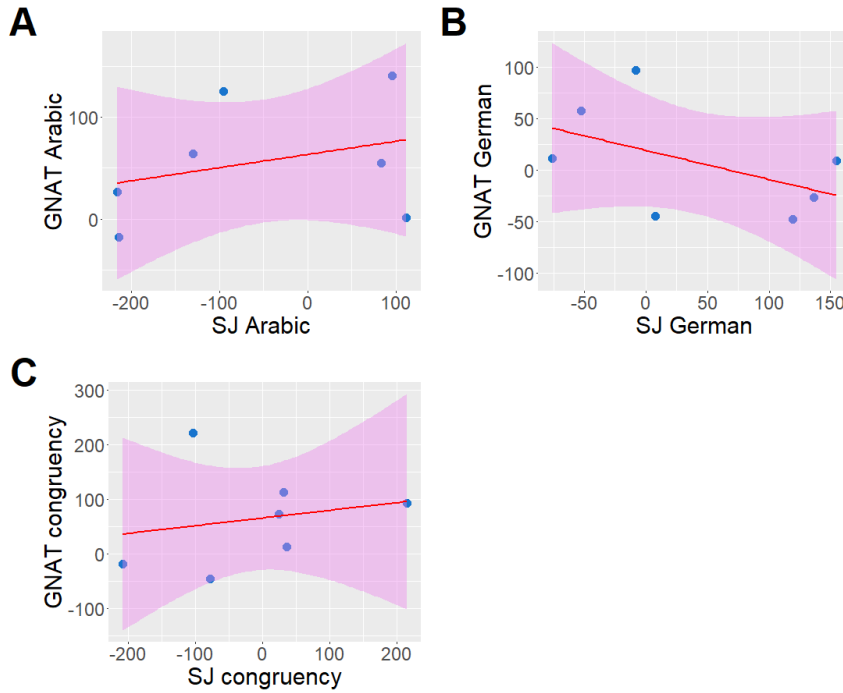

Correlations between congruency variables (left-handers)

Note. Values in each cell represent correlations coefficients. Color coding denotes the direction of the correlation (see legend). Crosses indicate non-significant correlations ($p > .05$).

Figure C5

Paired correlations between SJ and GNAT congruency variables (left-handers)

Note. Panel A: correlation between GNAT_{Arabic stereotypes} and SJ_{Arabic stereotypes}. Panel B: correlation between GNAT_{German stereotypes} and SJ_{German stereotypes}. Panel C: correlation between GNAT_{congruency} and SJ_{congruency}. Red lines represent predictions from linear models. Shaded areas represent the 95% confidence intervals. All variabl
