1 Supplementary Figures

Supplementary Figure S 1. Distribution of AUCs based on the TdP-risk using $dV_m/dt_{\text{Max_repol}}$ of Chantest et al.; (a, b, c), AUC distribution for the high, intermediate, and low-risk of the CNN classifier for 16 test drugs; (d, e, f), AUC distribution for the high, intermediate, and low-risk for the CNN classifier for all 28 drugs

Supplementary Figure S 2. Distribution of AUCs based on the TdP-risk using qInward variability of all 28 drugs in the Chantest et al. study; (a, b, c) AUC distribution for the high, intermediate, and low risk of the CNN classifier for 16 test drugs

2 Supplementary Tables

Supplementary Table S 1 CNN classifier performance for 16 drugs of three datasets according to in silico feature variability; performance indexes represent the median, the minimum, and the maximum values as the results of 10,000 times test algorithms; Three asterisks (***) denote excellent performance over 0.9 of the median AUC value, two asterisks (**) for good performance over 0.8 of the median AUC value, and one asterisk (*) for moderate performance over 0.7 of the median AUC value.
