

**Supplementary Table 1.** Interpretive categories and minimum inhibitory concentration breakpoints (in µg/mL) based on Performance Standards for Antimicrobial Disk and Dilution Susceptibility Tests for Bacteria Isolated from Animals, 5<sup>th</sup> Edition (CLSI, Vet01S).

Antimicrobial agent	Susceptible	Intermediate	Resistant	Breakpoint source
<i>Aminoglycosides</i>				
Amikacin	≤ 4	8	≥ 16	Canine systemic*
Gentamicin	≤ 4	8	≥ 16	Human systemic
<i>Phenicols</i>				
Chloramphenicol	≤ 8	16	≥ 32	Human systemic
<i>Fluoroquinolones</i>				
Difloxacin	≤ 0.5	1-2	≥ 4	Canine systemic
Enrofloxacin	≤ 0.5	1-2	≥ 4	Canine systemic
Marbofloxacin	≤ 1	2	≥ 4	Canine systemic
Orbifloxacin	≤ 1	2-4	≥ 8	Canine systemic
Pradofloxacin	≤ 0.25	0.5-1	≥ 2	Canine systemic
<i>Lincosamides</i>				
Clindamycin	≤ 0.5	1-2	≥ 4	Canine systemic
<i>Tetracyclines</i>				
Doxycycline	≤ 0.12	0.25	≥ 0.5	Canine systemic
Minocycline	≤ 0.5	1	≥ 2	Canine systemic
Tetracycline	≤ 0.25	0.5	≥ 1	Canine systemic
<i>Macrolides</i>				
Erythromycin	≤ 0.5	1-4	≥ 8	Human systemic
<i>Ansamycins</i>				
Rifampin	≤ 1	2	≥ 4	Human systemic
<i>Folate pathway antagonists</i>				
Trimethoprim sulphamethoxazole	≤ 2/38	--	≥ 4/76	Human systemic
<i>Beta-lactams</i>				
Oxacillin	≤ 0.25	--	≥ 0.5	Human systemic
Penicillin	≤ 0.12	--	≥ 0.25	Human systemic
<i>Glycopeptides</i>				
Vancomycin	≤ 4	8-16	≥ 32	Human systemic

\* Not utilized due to plate configuration issues (testing not in range)
