Subjective well-being											
FinnGen	3	1.00 (0.60 – 1.68)	0.992	NA	NA	NA	NA	NA	NA	NA	NA
UK Biobank	3	1.39 (0.45 – 4.25)	0.563	NA	NA	NA	NA	NA	NA	NA	NA

*One or more outliers excluded.

P values below the Bonferroni-corrected threshold for number of mental health of 6.25×10^{-3} are shown in bold and suggestive *P* values between 0.05 and 6.25×10^{-3} are shown in bold-italic.

ADHA indicates attention deficit/hyperactivity disorder; CI, confidence interval; IVW, inverse-variance weighted; MR, Mendelian randomization; MR-PRESSO, MR-pleiotropy residual sum and outlier; NA, not available; OR, odds ratio; PTSD, post-traumatic stress disorder; and SNPs, single nucleotide polymorphisms.

Table S2. Sensitivity analyses for the Mendelian randomization associations of mental health with risk of self-reported hypertension in UK Biobank

UK Biobank			
Self-reported hypertension			
(cases: 199,731, controls: 343,202)			
Mental health	SNPs	OR (95% CI)	P
Anxiety disorder	5	1.02 (0.96–1.08)	0.543
ADHD	8	1.01 (0.96–1.06)	0.746
Autism spectrum disorder	2	0.98 (0.70–1.39)	0.924
Depression	101	1.12 (1.05–1.19)	2.76×10⁻⁴
Neuroticism	84	1.11 (1.03–1.20)	4.11×10⁻³
PTSD	2	0.97 (0.90–1.05)	0.460
Schizophrenia	108	0.98 (0.96–1.00)	0.078
Subjective well-being	3	1.61 (0.87–2.98)	0.127

Results are derived from the fixed-effects inverse-variance weighted analysis. *P* values below the Bonferroni-corrected threshold for number of mental health of 6.25×10^{-3} are shown in bold and suggestive *P* values between 0.05 and 6.25×10^{-3} are shown in bold-italic. ADHA indicates attention deficit/hyperactivity disorder; CI, confidence interval; OR, odds ratio; PTSD, post-traumatic stress disorder; and SNPs, single nucleotide polymorphisms.

SNP, single nucleotide polymorphism; EA, effect allele; OA, other allele; se, standard error; pval, *p*-value.

Figure S1. Scatter plots of SNP effects regarding the associations of depression with hypertension in (A) FinnGen and (B) UK Biobank, with the slope of line corresponding to estimated Mendelian randomization effect derived from inverse-variance-weighted analyses

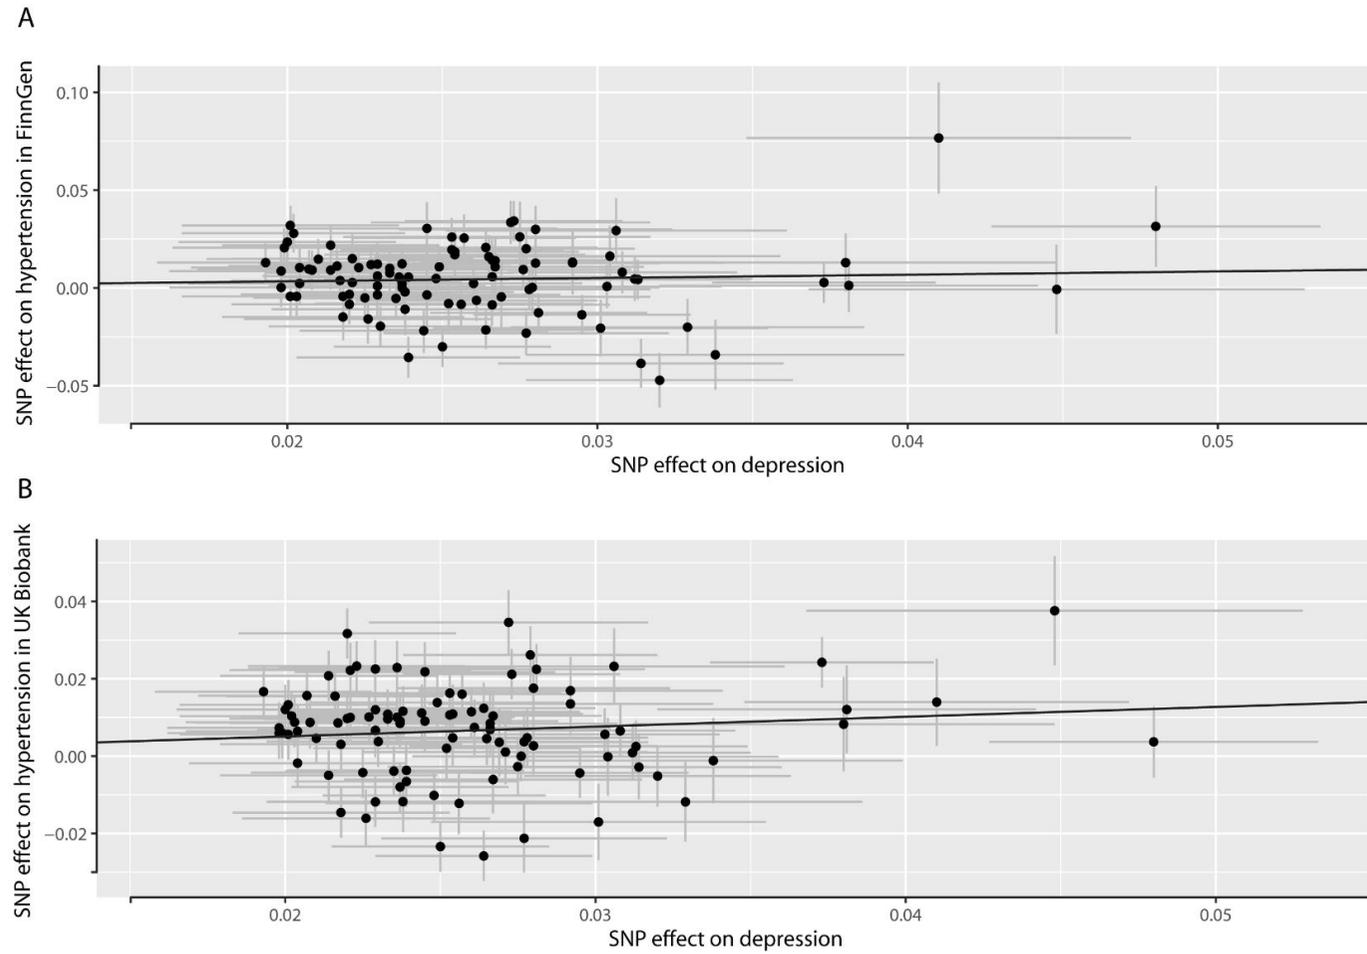

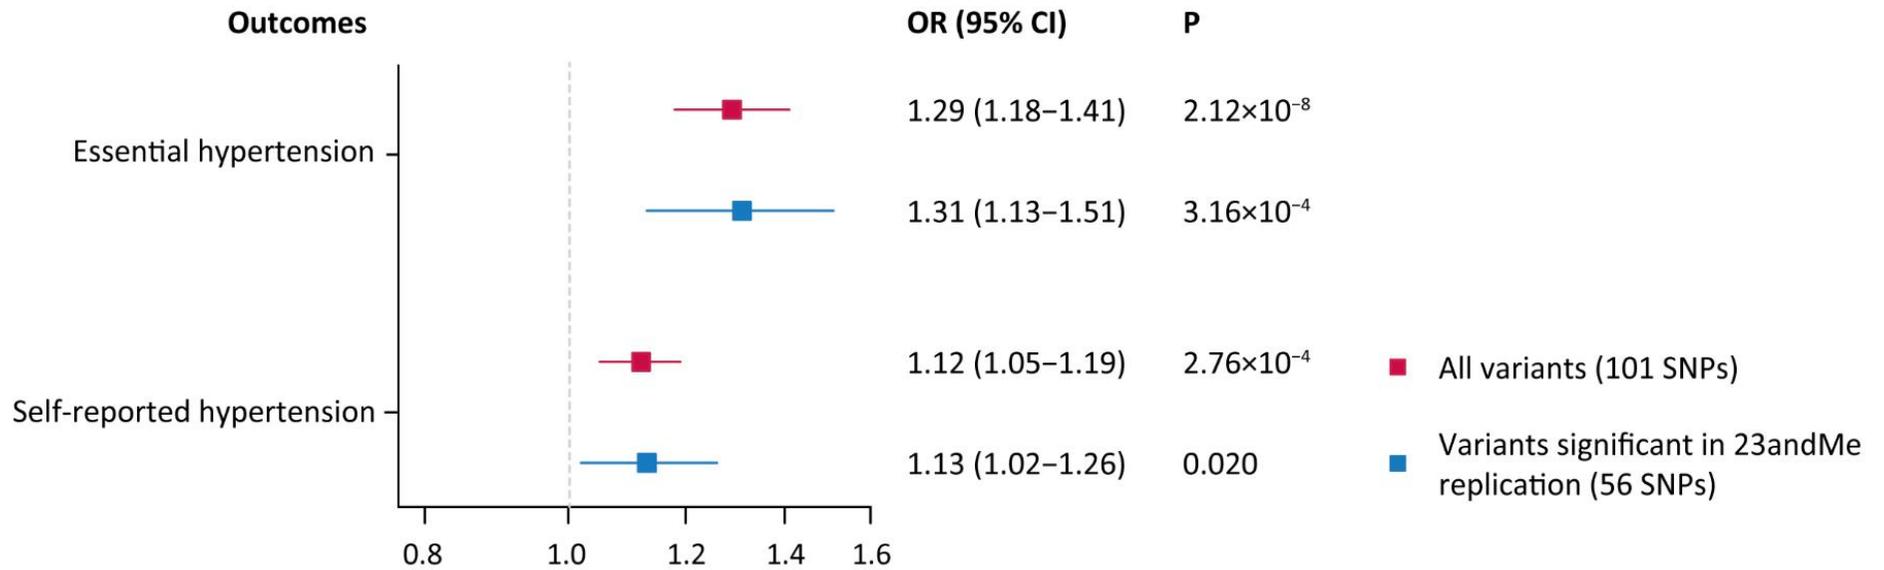

Figure S2. Mendelian randomization association of depression with hypertension

CI indicates confidence interval; OR, odds ratio; and SNPs, single nucleotide polymorphisms.
