

Supplemental Figure 2

Suppl. Figure 2. Renin-angiotensin system Fingerprints from equilibrium analysis of plasma samples of each experimental group. The median plasma concentrations of angiotensin metabolites in pmol/L in the RAS Fingerprints correspond to the sphere sizes, $n = 7/\text{group}$. Ang: Angiotensin, LVT: low tidal volume, lisi: lisinopril, dose level of ALT-00 in $\mu\text{g/kg/min}$.
