

Supplementary Material

Figure S1 Admixture results at K values from 2 to 6 based on 40,209 SNPs.

Figure S2 Genome size estimation of the three individuals of the “unidentified sample”. Red and blue peaks represent the “unidentified sample” and the internal standard (tomato), respectively.

Figure S3 Plots of read count ratios for heterozygous sites covered by at least 30 reads for *B. luminifera*.

Figure S4 Plots of read count ratios for heterozygous sites covered by at least 30 reads for the “unidentified sample”.

Figure S5 Phylogenetic tree from the maximum-likelihood analysis of the “unidentified sample” using ITS sequences.

Figure S6 Phylogenetic tree from the maximum-likelihood analysis of the “unidentified sample” using ITS1 sequences.

Figure S7 Phylogenetic tree from the maximum-likelihood analysis of the “unidentified sample” using ITS2 sequences.

Figure S8 Pictures of *Betula luminifera* #19933472 from the Royal Botanic Garden in Edinburgh. (A) fruit; (B) male catkins; (C) and (D) bark.

Figure S9 A picture of an isotype specimen of *B. mcallisteri* (originally labelled as DEDL001).

Table S1 Detailed information on samples used in the present study.
