

The visual materials were comprised of two short videos, which were shown before and after participants heard the experimental sentences. The presented images show the final frame from the first video of the person in an inactive position looking ahead seated at the table on which were two objects. While participants viewed this image, they listened to a sentence that referred either to the recently performed action on one of the objects shown in the first video or to an equally plausible future action involving the other object shown in the second video.
