1 Supplementary Figures and Tables

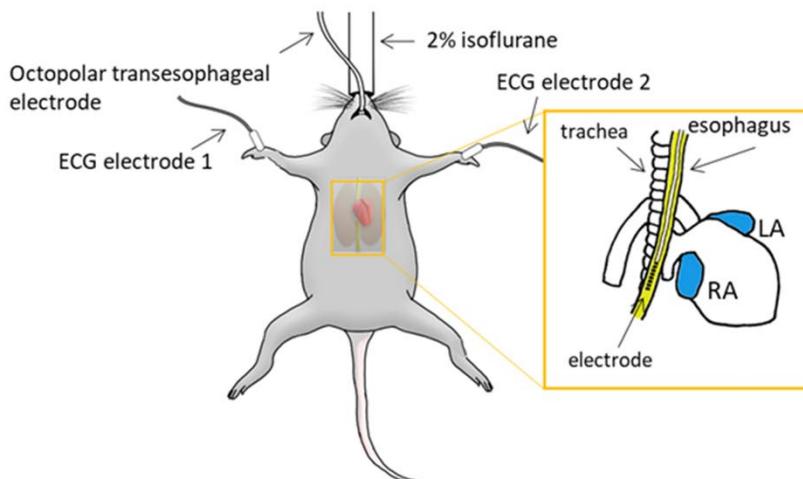

1.1 Supplementary Figures

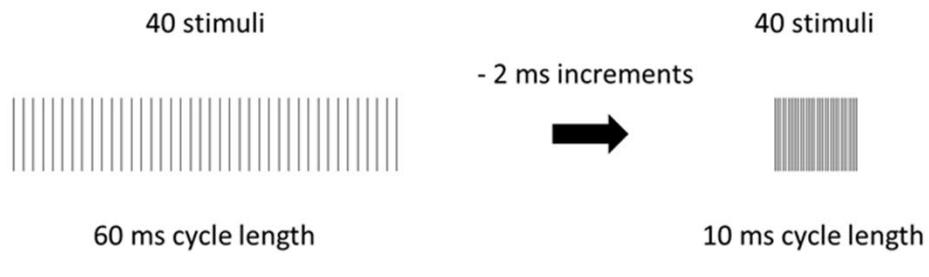

Supplementary Figure 1.

Quantitative RT-PCR analysis of Rapgef4 mRNA expression in left ventricles from mice Rapgef4^{+/+} and Rapgef4^{ff} expressing (Cre^{+/-}) or not (Cre^{-/-}) the Cre recombinase using two couples of primers (Ex3F TGTTAAAGTGTCTGAGACCAGCA with Ex4R AAAGGCTGTCCAATTCCAG and Ex17F TTATGCCAAATACCCAGCTTG with Ex18R CTCTGTTGTTGAGGGCATAATC). Rapgef4 exon 17 was quantified relatively to Rapgef4 mRNA level.(reference gene = RPL13)

**Supplementary Figure 2.**

Assessment of AF inducibility and probability by rapid transesophageal stimulation. (A) Schematic representation of the TS system by the introduction of an octopolar catheter and ECG recording. (B) Pacing protocol used to evaluate AF inducibility and probability. (C) Representative ECG traces of sinus rhythm and AF episode.

**Supplementary Figure 3.**

Electrophysiological properties of mice atria were studied using optical mapping set-up. (A) Optical mapping set-up is composed by a CMOS camera, an objective, and a LED, and a perfusion and pacing device. (B) Representation of an Optical Action Potential (OAP) recorded thanks to the optical mapping set-up, and used to study electrophysiological properties of mice atria.

Supplementary Figure 4.

Relative expression of EPAC genes in mouse atria. (A) EPAC1 mRNA (RAPGEF3) expression in mouse right atria (RA) and left atria (LA). (B) EPAC2 mRNA (RAPGEF4) expression in mouse RA and LA. N=7.
