

## **Supplementary material**

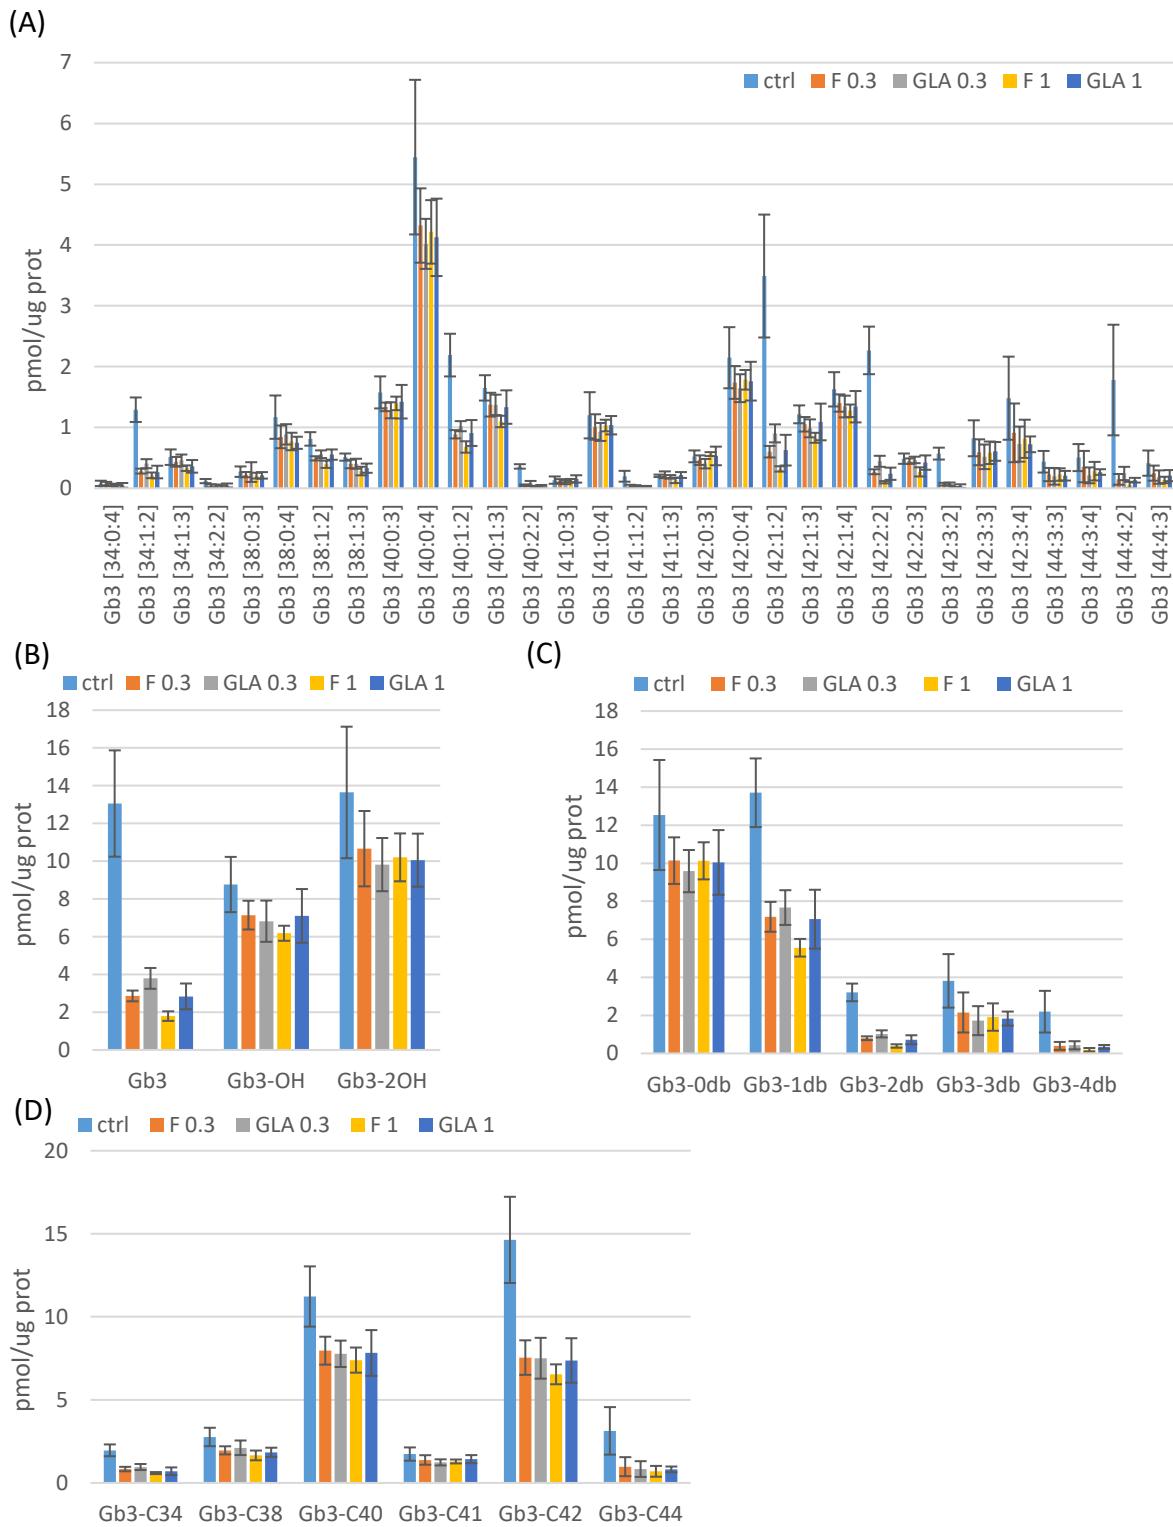

### **A Universal GlycoDesign for Lysosomal Replacement Enzymes to Improve Circulation Time and Biodistribution**

Yen-Hsi Chen, Weihua Tian, Makiko Yasuda, Zilu Ye, Ming Song, Ulla Mandel, Claus Kristensen, Lorenzo Povolo, André R. A. Marques, Tomislav Čaval, Albert J.R. Heck, Julio Lopes Sampaio, Ludger Johannes, Takahiro Tsukimura, Robert Desnick, Sergey Y. Vakhrushev, Zhang Yang, and Henrik Clausen

**Supplementary Figure S1.** Summary of Gb3 LC-MS/MS profiling analysis of Fabry mice kidneys.

**Supplementary Figure S2.** Summary of comprehensive lipidome analysis.

**Supplementary Figure S3.** SDS Coomassie staining of purified proteins.

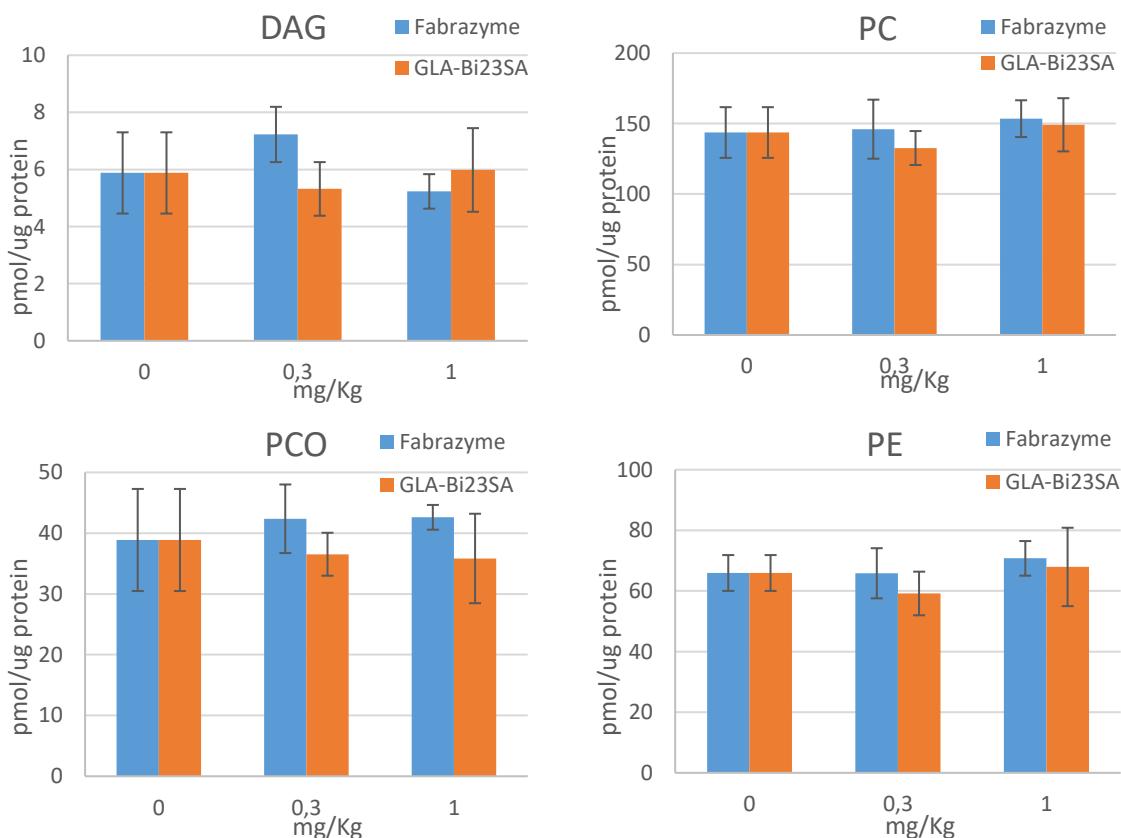

**Supplementary Fig. S1.** Summary of Gb3 shotgun lipidomics profiling analysis of Fabry mice kidneys. Mice were infused with Fabrazyme 0.3 mg/kg (F 0.3) or 1.0 mg/kg (F 1), GLA LAGD 0.3 mg/kg (GLA 0.3) or 1.0 mg/kg (GLA 1), or saline control (ctrl) every two weeks for 5 times. (A) Quantitation of all Gb3 isoforms present in the kidney. (B) Quantitation of total Gb3 species with and without mono and di-hydroxylation. (C) Quantitation of total Gb3 species with unsaturation lipids. (D) Quantitation of total Gb3 lipid chain length species. Data are the average of five biological replicates and error bars represent the standard deviation of the mean.

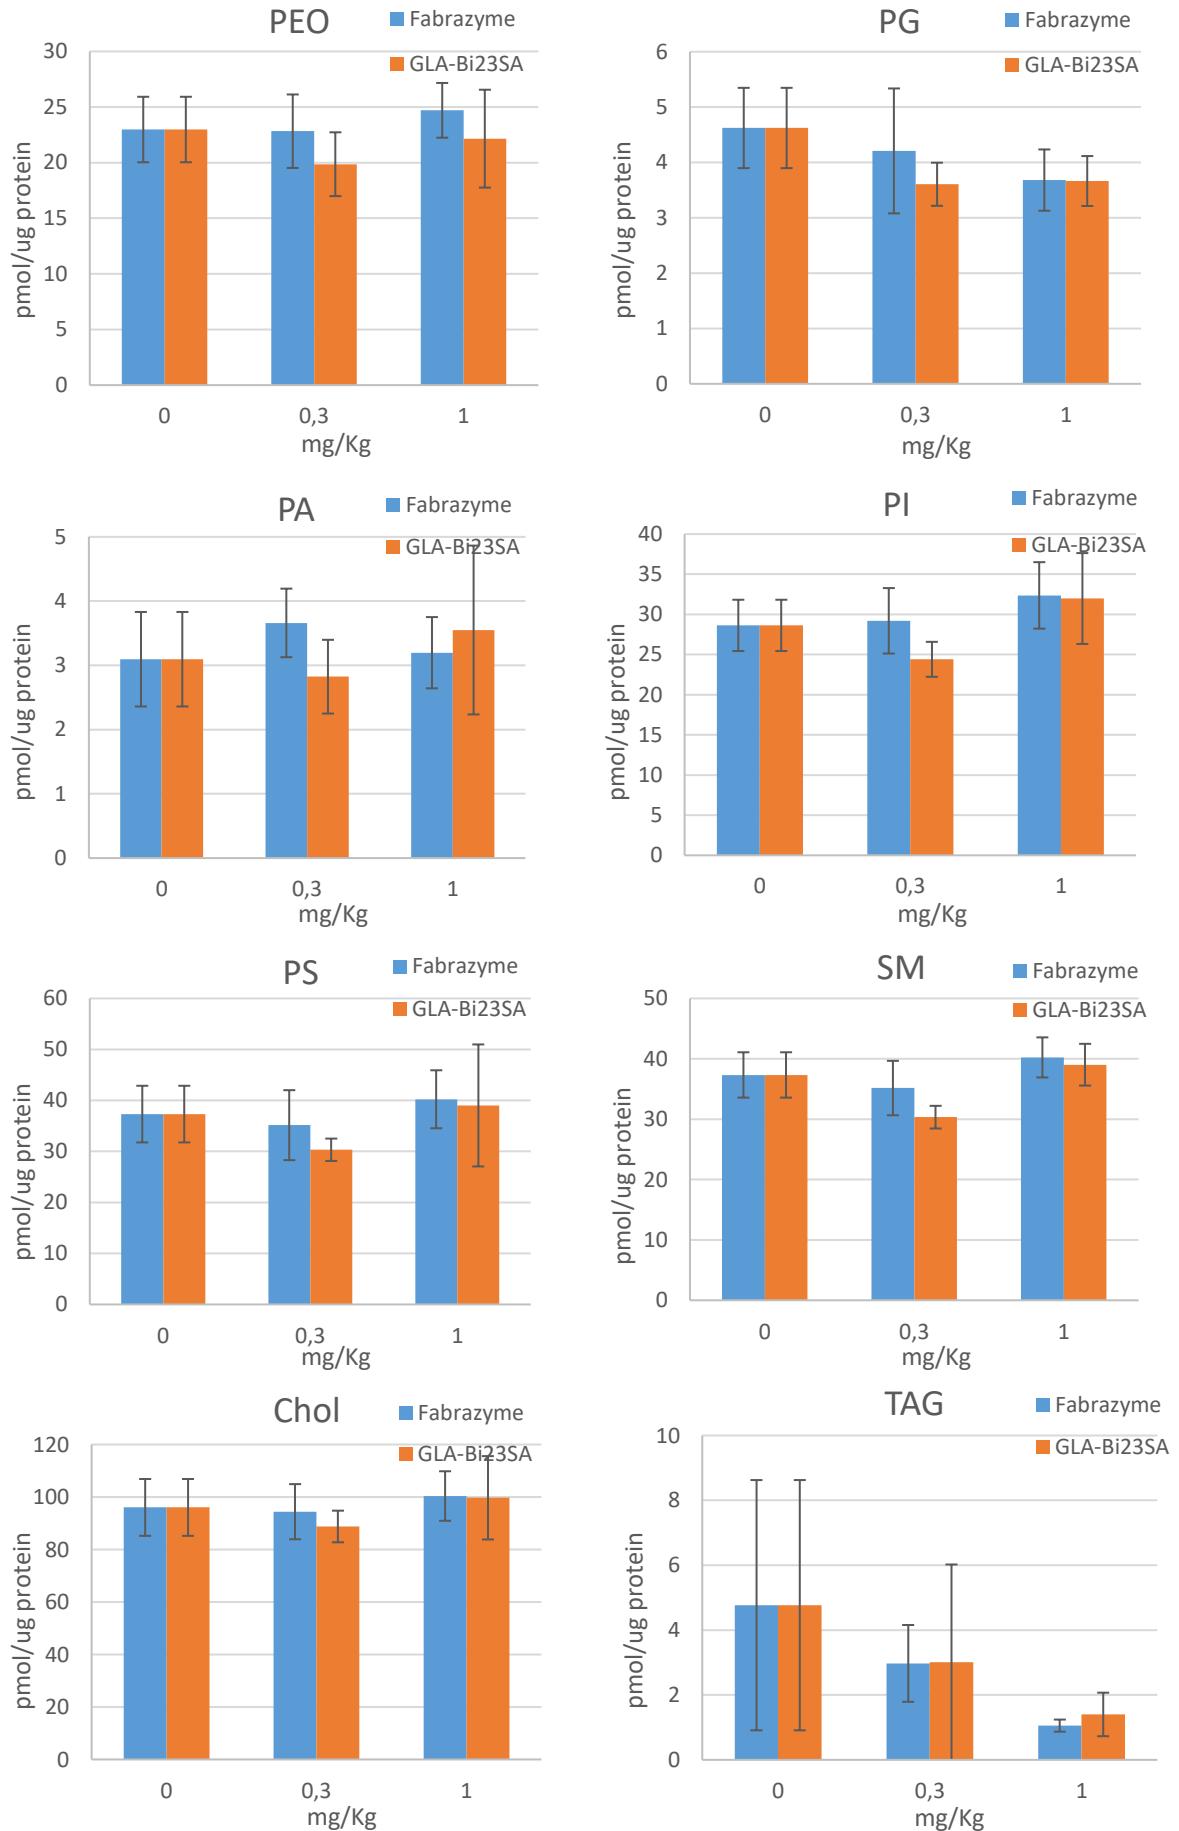

### A. Kidney lipid class profiles
