Table S1 Data division in cross-validation

The P-values of IDH status are calculated between the public and local cohorts (Pintra) and between training and validation cohorts (Pintra) by using chi-square test.

Acronym	Machine-learning classifier name	Short description			
LR	logistic regression	A generalized linear regression model with			
		the form $Y = WX + b$ (1).			
kNN	k-nearest neighbors	A non-parametric learning algorithm that			
		determines the class of the unknown			
		sample based on the types of the nearest k			
		samples (2).			
NB	naive bayes	A classifier that is based on Bayes'			
		theorem (3).			
l-SVM	support vector machines with linear	A machine-learning algorithm that is the			
	kernel	specific support vector machine using the			
		linear kernel (4).			
r-SVM	support vector machines with radial	A machine-learning algorithm that is the			
	basis function kernel	specific support vector machine using the			
		radial basis function (5).			
RF	random forest	An ensemble classifier that uses multiple			
		decision trees to train and predict samples			
		(6).			
Adaboost	adaptive boosting	A machine-learning algorithm that trains			
		different weak classifiers on the same			
		training set and then assembles them to			
		create a strong classifier (7).			
LDA	linear discriminant analysis	A machine-learning algorithm that			
		projects high-dimensional sample features			
		into the best discrimination vector space			
		for classification (8).			

Table S2 the description of eight classifiers

_

Feature name consists of the description of the modality, tumor subregion, filter and feature type.

Feature Name	Selected Time	P*
T1WI_signature		5.91e-69
T1CE_signature		1.03e-80

Table S4 the DL signatures and CR features used as predictors of the classifiers

T2WI_signature		8.96e-78
FLAIR_signature		5.62e-66
T1WI_WT_original_glrlm_RunEntropy	10	4.11e-13
T2WI_TC_wavelet-LLL_firstorder_10Percentile	10	5.57e-22
FLAIR _WT_wavelet-HLH_gldm_DependenceVariance	9	7.53e-07
FLAIR _TC_wavelet-LHL_firstorder_Skewness	8	3.94e-04
FLAIR _WT_original_shape_Sphericity	7	1.18e-08
T2WI_WT_wavelet-HLL_glcm_Idn	5	2.76e-07
T1WI_WT_wavelet-LLH_glrlm_RunEntropy	5	1.87e-04

Feature names consist of the descriptions of the modality, tumor subregion, filter, and feature type. *P-values of features are calculated between IDH mutation and IDH wildtype by using unpaired *t*-test.

Subcategory	Classifier	Accuracy	AUC	Specificity	Sensitivity	RSDAUC
