Values in the same row (a, b) or in the same column (A, B) with different letters are significantly different ($P < 0.05$).

LGM, in the form of chelates (lysine Mn: glutamic acid Mn = 1:1). MnSO₄, in the form of sulfate Mn. SEM, standard error of means. D, effect of day. T, effect of group. D × T, interaction between day and group.
