

Supplementary 2. Table: Virtues considered important

This table is the complete version of Table 5. For each category, the respondents were asked to select up to the fifth most important virtue. This table deals with the first of these. For comparisons between the GP and ES and also PR and npr-ES, after Fisher's exact probability test, multiplicity was adjusted by Holm's method and p-values were obtained. When the ratio was significantly greater for ES than for the GP and for PR than for npr-ES, * denotes $p < 0.05$, and ** denotes $p < 0.01$. When the ratio was significantly smaller for ES than for the GP and for PR than for npr-ES, † indicates $p < 0.05$, and †† indicates $p < 0.01$. Respondents were asked to select up to 3rd place, but only 1st place was used in the analysis. The reason was that the strength of preference between 2nd place and 3rd place was unknown, and we thought that only using 1st place for analysis would better reflect the subject's preference. GP: general public, ES: educational specialists, PS: professional researchers, npr-ES: non-professional educational specialists.

Category	virtue	GP								ES								
					Total	Percentage difference	Effect size	p-value with Fisher's exact probability test	p-value adjusted for multiplicity by Holm's method		PR	npr-ES	Percentage difference	Effect size	p-value with Fisher's exact probability test	p-value adjusted for multiplicity by Holm's method
