na, Not applicable; - Sequence not available or too short.

\* The 16S rRNA gene sequence (KT724704) of "*E. collicola*" Mol 12 was an outlier and excluded from phylogenetic analyses.

† *E. shofinae* CCBAU 251167<sup>T</sup> genome sequence MBFK01: NCBI notes "anomalous assembly"; *rpoB* (housekeeping gene) not found in genome sequence.

‡ Three copies of the 16S rRNA gene present in the genome of *Ensifer arboris* LMG 14919<sup>T</sup> (Accession no. ATYB01) were found to be anomalous and excluded from the 16S rRNA phylogenetic analysis.

**Supplementary Table 2.** Average Nucleotide Identity (ANI) and digital DNA–DNA hybridization (dDDH) values for pair-wise comparisons of genome sequences of *Ensifer canadensis* sp. nov. T173<sup>T</sup> (Accession no. CP083370-CP083375) with closest relatives.

Reference Strain (Sequence Accession no.)	Fast ANI*	dDDH % [C.I.]†
	T173 <sup>T</sup>	T173 <sup>T</sup>
<i>Ensifer morelensis</i> Lc04 <sup>T</sup> (JABEKT01)	88.6	35.7 [33.3-38.2]
<i>Ensifer adhaerens</i> Casida A <sup>T</sup> (CP015880 - CP015882)	83.8	25.5 [23.2-28.0]
<i>Ensifer sesbaniae</i> CCBAU 65729 <sup>T</sup> (JABEKU01)	83.7	25.8 [23.5-28.3]

\*Values represent averages of reciprocal comparisons.

†dDDH values and confidence intervals [C.I.] based on Genome BLAST Distance Phylogeny (GBDP) formula 4 implemented in the Type Strain Genome Server (TYGS); formula 4 is independent of genome length and is robust against use of incomplete draft genomes.

**Supplementary Table 3.** BLAST results for T4SS (*virB1* through *virB11*) and *repABC* genes of pT173b (CP083372) as query versus *Rhizobiales* whole-genome shotgun contigs and standard nr/nt databases in NCBI.

T173<sup>T</sup> and reference taxa of the genus *Ensifer*. Alignment length, 23067bp. Only posterior probabilities  $\geq 90\%$  are shown. Bar, expected substitutions per site.

**Supplementary Figure 4.** Transmission (A, B and C) and scanning (D) electron microscope images showing cell morphological features of *Ensifer canadensis* sp. nov. strain T173<sup>T</sup>.

**Supplementary Figure 5.** Growth curves (48 hrs at 30 °C) in LB broth medium of (1) *E.canadensis*. sp. nov.T173<sup>T</sup>, (2) *E. adhaerans* Casida A<sup>T</sup>, (3) *E. morelensis* Lc04<sup>T</sup>, (4) *E. sesbaniae* CCBAU 65729<sup>T</sup>, (5) *E. americanus* CFNEI156<sup>T</sup>, (6) *E. fredii* USDA 205<sup>T</sup>, (7) *E. medicae* A321<sup>T</sup>, and (8) *E. meliloti* ATCC 9930<sup>T</sup>.

Vertical axis: bacterial growth based on OD (595 nm). Horizontal axis: hourly reads for 48 hours at 30 °C (three replicates of each bacterial strain).
