

Table S1. Variety and number of skeletal elements used for mercury analysis. Skeletal element includes unique bone types from axial and appendicular skeleton that include varying quantities of compact and spongy bone.

Skeletal Element	Specimen Number
atlas	5
carpal	1
femur	1
humerus	2
mandible	1
maxilla	1
metapodial	3
phalanges	9
radius	1
rib	4
scapula	4
skull	1
tarsals	2
tibia	2
unknown	2
vertebra	1
