XAV source: A, Sigma–Aldrich (X-3004), developing crystalline precipitates at 10 μ M after overnight culturing (See **Supplementary Figure 1**).
 B, Selleck (S1180) without crystalline precipitates at 10 μ M.

Differentiation: N, Tuj1-positive neuronal cells; O, O4-positive oligodendrocytes; A, GFAP-positive astrocytes;
 +, detected by immunofluorescence; nd, not determined.
