

Supplementary Figure 4

Supplementary Figure 4: Specificity and limit of detection (LoD) of Duplex ddPCR for *S. uberis* (A) and *S. dysgalactiae* (B) from genomic DNA mixture of pure cultures from 400 pg/μl (-1) to 0.04 pg/μl (-5). Su: *Streptococcus uberis*, Sd: *Streptococcus dysgalactiae*, NTC: no template control. #: Concentrations at which the signal was saturated (more than 20,000 copies/μl *: copies/μl of Su, &: copies/μl of Sd
