Result S1

Among the COG categories, amino acid transport and metabolism accounted for 338 genes, general function prediction and unknown function accounted for 13.08%, transcription accounted for 8.8%, and signal transduction mechanisms accounted for 5.38% (Figure. S1). Similarly, the number of CDSs assigned to the Kyoto Encyclopedia of Genes and Genomes (KEGG) database was 2,469, and the major pathways were global and overview maps (59.13%), carbohydrate metabolism (22.8%), amino acid metabolism (20.65%), environmental information processing (9.1%), genetic information processing (7.9%), and energy transport (5.38%). The SW7 genome consists of Enzymatic (Reactions) Commission numbers (EC) for transferases (92), hydrolases (93), lyases (18), oxidoreductases (40), isomerases (12), ligases

(35), and translocase (19). Interproscan showed the *Bacillus* sp. SW7 genome had Gene Ontology for abiotic, biotic, and stress response GO terms, and also has GO for iron-sulfur cluster binding (Magotra et al., 2021).

Table S1. Morphological, biochemical and plant growth-promoting (PGP) characteristics of *Bacillus* sp. SW7.

Morphological, biochemical and PGP features	<i>Bacillus</i> sp. SW7
Colony shape	Circular, Cream
Colony diameter, Colony elevation, Colony margin	7 nm, Raised, Undulate
Gram reaction	Gram-positive
Catalase, oxidase, ONPG (Beta-galactosidase)	+
Arginine (Arginine dihydrolase)	+
Citrate (Citrate utilization), Na thiosulfate (H ₂ S production), Urea (Urea hydrolysis)	-
Tryptophan (Deaminase), Na pyruvate (Acetoin production),	+
Charcoal gelatin (Gelatinase)	+
Glucose, Mannitol, Inositol (Fermentation/oxidation)	+
Sorbitol, Rhamnose, Sucrose, Melibiose, Amygdalin (Fermentation/oxidation)	-
Arabinose (Fermentation/oxidation)	+
Nitrogen fixation, Hydrogen cyanide	+
Siderophore production	-
Indole Acetic Acid (IAA)	3.60 ±0.44 ppm
Ammonia Production (ppm)	0.5 ppm
Phosphate Solubilization (SI)	83.3 g/L ⁻¹
Potassium Solubilization (KI)	39.6 g/L ⁻¹

Table S2. Pairwise comparisons of *Bacillus* sp. SW7 with reference genome of *Bacillus anthracis* str. Ames, *B. cereus* along with the 11 *Bacillus* isolated from the international space station using GBDP algorithm and GGDC calculated digital DDH value and confidence interval (C.I) and G+C content difference.

Query strain	Subject strain	dDDH (d0, in %)	C.I. (d0, in%)	dDDH (d4, in%)	C.I. (d4, in %)	dDDH (d6, in%)	C.I. (d6, in%)	G+C content difference (in %)

Figure S1. The influence of strain *Bacillus* sp. SW7 on the tomato plant shoot height in comparison with control.

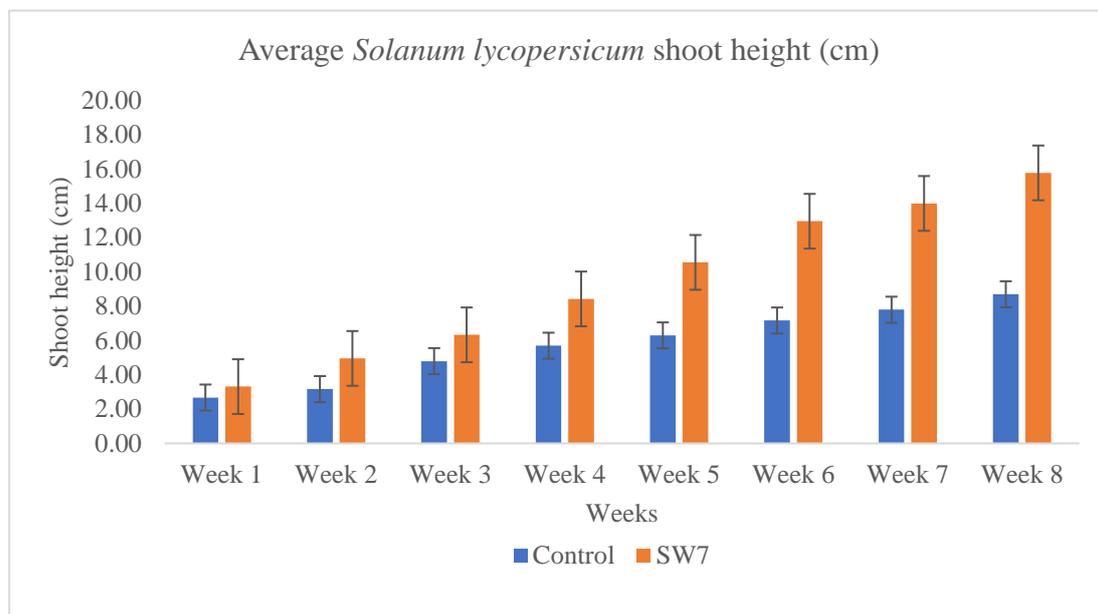

Figure S2. Cluster of genes (COG) assigned to the CDS of isolate *Bacillus* sp. SW7.

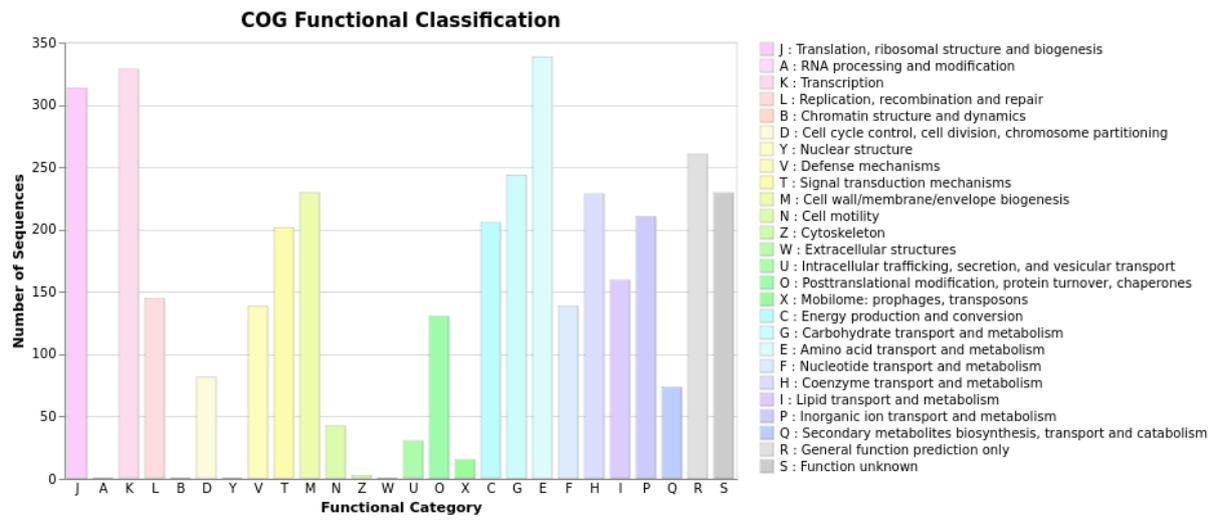

Figure S3. Pairwise alignment using mauve aligner (Darling et al., 2010) of *Bacillus* sp. SW7 A) with *Bacillus* sp. S1_R2T1-FB demonstrating a high ANI value B) with non-pathogenic *Bacillus cereus* Q1, C) with plasmidless *Bacillus anthracis* str. Ames and D) with plant growth-promoting (PGP) *Bacillus* sp. RZ2MS9 (PGPB). The colored block indicates the homologous region between the genomes.
