

Supplementary Material

Supplementary Figure 1. PRISMA flowchart for the review on (quasi-)experimental cross-sectional studies on anticipation in racket sports (see main text for details). Note that the approach was not meant to provide a full systematic review in the sense of an (almost) exhaustive coverage/overview of the literature but rather to showcase application of PAC classification (see main text for details). Therefore, we kept the PRISMA route of identification of studies via other methods rather short and consequently cannot rule out that we may have missed some reports, especially from earlier years, that are often not listed in databases.

Supplementary Table 1. Overview of reviewed studies on anticipation in racket sports upon which the PAC classification was applied (see main text for details).
