

Supplemental Figure S5

A

**Tolerability Study:
5-day-on/2-day-off/5-day-on Schedule**

B

**Tolerability Study:
5-day-on/9-day-off/5-day-on Schedule**

Supplemental Figure S5. Effect of IIQs on animal weights. A. Spider plot showing percent weight change in each mouse in a tolerability study testing IIQs administered by IV tail injection in a 5-day-on/2-day-off/5-day-on dosing schedule. Besides dramatic weight loss observed with higher doses of LMP744 and systemic toxicity with higher dose of LMP776, tail irritation was observed in majority of groups. **B.** Spider plot showing percent weight change in each mouse in a tolerability study testing IIQs administered by IV tail injection in a 5-day-on/9-day-off/5-day-on dosing schedule. Higher doses (>10mg/kg) of LMP400 and LMP744 resulted in systemic toxicity.
