

Supplementary Material

Supplementary Table 1. Systematic search details

Supplementary Table 2. Summary of Exclusion Criteria for Full-Text Articles

Supplementary Table 3. Detailed characteristics of the included studies

Supplementary Table 4. Quality assessment of the included studies using the Newcastle-Ottawa Scale (NOS)

Supplementary Table 5. Methodology of stool processing of the included studies

Supplementary Table 6. Results of subgroup analyses of different study regions

Supplementary Table 7. Results of subgroup analyses of studies with patients on treatment or treatment-naive studies

Supplementary Table 8. Results of sensitivity analyses by excluding studies with low quality (Newcastle-Ottawa Scale ≤ 5)

Supplementary Table 9. Results of sensitivity analyses by excluding studies without matching any variables

Supplementary Table 10. Publication bias assessment by egger's regression test in alpha diversity

Supplementary Figure 1. Funnel plots of publication bias assessment in alpha diversity

Supplementary Figure 2. Figures for study-level findings of relative abundance of gut microbes

Supplementary Table 1. Systematic search details ----- performed on March 1, 2024

Supplementary Table 2. Summary of Exclusion Criteria for Full-Text Articles

Number of Studies	Reason for Exclusion	Details
13	Clinical Trial Register Protocol	Studies lacking a control or comparator group, preventing meaningful data comparison for our meta-analysis.
4	Clinical Trial Register Protocol	Protocols or registrations for clinical trials that have not yet resulted in completed studies with analyzed data.
3	Non-English Language	Studies published in languages other than English, which were not included due to our study's language limitation.
7	Other Irrelevant Studies	Includes studies with data already covered in more comprehensive or recent publications (3 studies), and those lacking specific data on gut microbiota diversity or abundance required for our analysis (4 studies).

Supplementary Table 3. Detailed characteristics of the included studies

Disorder	Study	Country	Definition of disorder stage	Sample size	Mean age	Mean BMI (kg/m2)	% Female	% Patients on medication	Matching-variables

Supplementary Table 4. Quality assessment of the included studies using the Newcastle-Ottawa Scale (NOS).

The quality of the included research was assessed using the Newcastle-Ottawa Quality Assessment Scale (NOS). Those equal to or less than 5 were deemed indicative of low quality, while scores of 6 or 7 signified moderate quality, and scores of 8 or 9 indicated high quality. XL Deng and X Gong independently conducted assessments to determine the quality of the research involved in the analysis. In cases of score disagreement, the two reviewers examined the articles together to reach a consensus.

Case-control studies	Selection		Comparability			Exposure		Total 0-9
	Case definition	Representativeness of the case	Selection of controls	Definition of controls	Based on Assessment of exposure analysis	Same measurement for case and controls	Non-respondents

Supplementary Table 5. Methodology of stool processing of the included studies

Stool processing methods and compositional analyses also varied significantly. Sequencing of 16S ribosomal RNA (16S rRNA) was the most widely applied method, used with 54 studies, followed by shotgun metagenomics with 12 studies (5 of which exclusively used only the metagenomics), real-time quantitative polymerase chain reaction with 2 studies, and fluorescence in situ hybridization in one study.

Study	Sequencing	Collection & handling by participant	Long-term storage	DNA extraction method
Gong-2019	16S rRNA V4	Fecal samples were delivered to West China Hospital within 2 h and stored at 80°C	At -80°C	CTAB/SDS method
Herken-2019	16S rRNA V1-V2	Fecal samples were in standard stool collection tubes and shipped immediately (within 24 hours) at room temperature and were stored at -80°C until processing	At -80°C	QIAcube and the QIAamp DNA stool kit (Qiagen) and a prior beat-beating step
Chen-2020	16S rRNA V4	Fecal samples were collected and immediately positioned in standard sterile anaerobic collection tubes	At -80°C	QIAamp DNA Stool Mini Kit (Qiagen, Germany) according to the manufacturer's instructions.
Gong-2022	16S rRNA V3-V4	Participants discharged their feces into the sterile potty, took the middle part of the feces, instantly put them on ice, and stored at -80°C within 1–2 h after sample collection	At -80°C	E.Z.N.A.® Soil DNA Kit (Omega Bio-Tek, Norcross, GA, USA) according to the manufacturer's instructions
Wei-2022	16S rRNA V3-V4	Fecal samples were gathered into sterile drying tubes within minutes to hours of deposition frozen at -80°C immediately or at 4°C until they were transferred to -80°C (typically within 6 h)	At -80°C	QIAamp DNA Stool Mini Kit (QIAGEN, Hilden, Germany) according to the manufacturer's instructions

Ma-2020	16S rRNA V4	Stool samples were collected on the morning after admission and before immunotherapy.	At -80°C	QIAamp DNA Stool Mini Kit (Qiagen, Germany)
Moris-2018	16S rRNA V3	The volunteers provided a fresh fecal sample that was immediately frozen (-20 °C) until analyses	At -20°C	QIAamp DNA stool kit (Qiagen, GmbH, Hilden, Germany)
Qiu-2018	16S rRNA V4	Fecal samples were in the scoop attached to the screw-capped container. All collected samples were preserved at 4°C during transportation	At -80°C	DNA Isolation Kit (MoBio, Carlsbad, CA, United States) according to the manufacturer's protocol
Zheng-2019	16S rRNA V3-V4	Fresh stool samples were collected from each participant and immediately frozen at -80 °C until further analysis	At -80°C	QIAampDNA Stool Mini Kit (Qiagen, Hilden, Germany)
Liu-2021	Metagenomics	Approximately 2 g of a fresh fecal sample was collected in a Fecal collection tube (OMR-200 DNA Genotek) and stored at room temperature until DNA extraction (21–28 days)	At room temperature	TruSeq DNA Nano Reference Guide (1000000040135) and Hiseq 2500 System Guide (15035786) from Illumina
Totzeck-2021	16S rRNA V3-V4	Fresh faecal samples were collected from participants in the morning. Faeces were transferred into provided collection tubes using an enclosed spoon and returned to study staff who transported them to the Institute of Medical Microbiology at 4°C within 12 h of specimen collection	At -80°C	QIAamp Fast DNA Stool Mini kit (Qiagen), following the manufacturer's instructions.
Ding-2023	16S rRNA V3-V4	Fecal samples were collected immediately, transported to the laboratory, and promptly frozen at -80°C	At -80°C	OMEGA Soil DNA Kit (M5635-02) (Omega Bio-Tek, Norcross, GA, United States)

Zhao-2023	16S rRNA V3-V4	Fecal samples were collected once the healthy control group was enrolled	At -20°C	DNA Extraction Kit (MP biomedical, Santa Ana, CA, United States) according to the manufacturer's instructions
Cree-2016	16S rRNA	NA	NA	MoBio PowerMag Soil DNA Isolation Kit as per the vendor's protocol
Gong-2019	16S rRNA V3-V4	Fecal sample aliquots from the participants were frozen at -80°C immediately after collection	At -80°C	QIAamp DNA stool Mini Kit (Qiagen, Germany), according to the manufacturer's instructions.
Zeng-2019	16S rRNA V3-V4	Stool samples were collected at one study center and stored at -80 °C immediately	At -80°C	QIAamp DNA Stool Mini Kit (Qiagen, Germany), following the manufacturer's instructions.
Pandit-2020	16S rRNA V4	Stool samples were collected in containers, and were delivered on the same day of collection over a median period of 3 hours (range: 1–5 hours). Stool samples were then immediately frozen at -80°C	At -80°C	QIAamp® DNA Stool extraction kit as per the manufacturer's instruction
Shi-2020	16S rRNA V3-V4	A fresh stool sample was obtained from each participant immediately after defecation using a sterile stool collector and stored at -80 °C	At -80°C	QIAamp Fast DNA Stool Mini Kit (Qiagen, Hilden, Germany) according to the manufacturer's protocol
Takewaki-2020	16S rRNA V1-V2	Freshly collected fecal samples were transported at 4 °C to the laboratory in a plastic bag containing a disposable oxygen-absorbing and carbon dioxide-generating agent. In the laboratory, the fecal samples were suspended in phosphate-buffered saline containing 20% glycerol, immediately frozen using liquid nitrogen, and stored at -80 °C	At -80°C	Enzymatic lysis methods

Zhang-2020	16S rRNA V3-V4	NA	NA	Standard commercial kits according to the standard protocol (G-BIO Technologies, Hangzhou, China)
Cantarel-2015	16S rRNA	Samples were shipped overnight on ice packs to the processing facility, where they were immediately stored at -80 °C	At -80°C	UltraClean Fecal DNA Isolation Kit (MoBio, Carlsbad, CA)
Miyake-2015	16S rRNA V1-V2	Freshly collected fecal samples were transported at 4°C to the laboratory in a plastic bag containing a disposable oxygen-absorbing and carbon dioxide-generating agent in which anaerobes sensitive to oxygen can survive. In the laboratory, the fecal samples were suspended in phosphate-buffered saline containing 20% glycerol, immediately frozen using liquid nitrogen, and stored at -80°C	At -80°C	enzymatic lysis methods
Chen-2016	16S rRNA V3–V5	Samples were frozen at -70 °C within 24 hours of receipt	At -70°C	MoBio PowerSoil Kit (MoBio Laboratories, Carlsbad, CA, USA) as per the manufacturer's instruction
Jangi-2016	16S rRNA V3-V5, V4	Collection containers were then placed in boxes with provided ice packs for immediate shipment to our laboratory via overnight delivery at a maintained temperature of 0 °C. On receipt of samples, they were frozen at 80 °C	At -80 °C	PowerSoil DNA Isolation kit (MO BIO Laboratories, Carlsbad, CA, USA) with the Human Microbiome Project modifications to the manufacturer's protocol
Tremlett-2016	16S rRNA V4	Participants were asked to collect and ship overnight (on ice) a sample of the child's first stool of the day to UCSF where it was stored at -80 °C	At -80°C	PowerSoil® DNA Isolation Kit (MO BIO Laboratories, Inc, Carlsbad, CA)

Berer-2017	16S rRNA V3-V5	Fecal samples were directly collected in hospital or were taken at home, stored at -20°C , and transferred to the hospital in cooling bags. Finally, all samples were stored at -80°C	At -80°C	NA
Cekanaviciute-2017	16S rRNA V4	Samples were collected using culture swabs (BD #220135) and stored at -80°C	At -80°C	MoBio Power Fecal DNA extraction kit (MoBio #12830)
Swidsinsk-2017	fluorescence in situ hybridization	NA	NA	NA
Forbes-2018	16S rRNA V4	Each participant self-collected two stool specimens approximately 2 months apart. The stool samples were kept refrigerated at 4°C until transport. The stool was transported to the laboratory on ice and stored at -80°C	At -80°C	ZR-96 Fecal DNA Kit (Zymo Research, Irvine, CA) following a validated protocol
Tankou-2018	16S rRNA V4	Subjects collected two samples at each time point produced at any time of day with no specific dietary restrictions. Collection containers were then placed in boxes with provided ice packs for immediate shipment to laboratory via overnight delivery at a maintained temperature of 0°C . On receipt of samples, they were frozen at -80°C	At -80°C	MoBio PowerLyzer PowerSoil Kit
Kozhieva-2019	16S rRNA V3-V4	Faecal samples were collected into 10 ml sterile faecal specimen containers and stored frozen at approximately -20°C . Samples were transferred to the laboratory within 1 week of collection and stored at -80°C until used for DNA extraction	At -80°C	MetaHIT protocol

Oezguen-2019	16S rRNA V3-V5	All samples were frozen and kept at -80°C	At -80°C	PowerSoil isolation kit (MO BIO Laboratories, Carlsbad, California, USA)
Storm-Larsen-2019	16S rRNA V3-V4	Stool samples were collected by the patient at home in special tubes with preservatives (PSP tubes, Stratec), shipped to the central study laboratory and stored at -80°C	At -80°C	PSP Spin Stool DNA Kit (Stratec Molecular GmbH)
Ventura-2019	16S rRNA V4	Subjects were provided with stool collection containers as well as coolers with ice packs. Once the sample was collected and placed in the coolers, the sample was either picked up by courier or brought into the clinic within 24 hours of production, then were stored at -80 °C	At -80°C	PowerSoil DNA Isolation Kit (MOBIO, West Carlsbad CA), according to the manufacturer's protocol
Choileain-2020	16S rRNA V4	Donors collected stool at home using a provided kit. Samples were collected at room temperature in RNeasy® solution (Ambion, cat. AM7021) and shipped overnight. Samples were then aliquoted and frozen at 70 °C	At -70 °C	Mobio PowerSoil DNA isolation kit (cat. 12888-100)
Kishikawa-2020	Metagenomics	Fecal samples had been immediately frozen after production in an insulated container for storage at -20°C and subsequently stored at -80°C within 24 h after production	At -80°C	NA
Ling-2020	16S rRNA V3-V4	Approximately 2 g of a fresh fecal sample was collected in a sterile plastic cup, and stored at -80°C after preparation within 15 min	At -80°C	QIAamp® DNA Stool Mini Kit (QIAGEN, Hilden, Germany) according to the manufacturer's instructions

Reynders-2020	16S rRNA V4	Samples were stored at 20°C immediately after sampling, in the participants' home freezer or at the NMSC, and transferred on dry ice to 80°C within 48 h	At -80°C	Adapted Mobio PowerMicrobiome DNA/RNA isolation Kit-based protocol.
Saresella-2020	16S rRNA V1-V3	NA	NA	DNeasy Blood and Tissue kit (QIAGEN) with the modifications
Barone-2021	16S rRNA V3-V4	NA	NA	NA
Cox-2021	16S rRNA V4	Study subjects collected a stool sample at home, then shipped samples overnight on icepacks to the laboratory, and samples were frozen at 80C upon receipt	At -80°C	DNAeasy PowerLyzer Microbiome DNA extraction kit (QIAGEN, Hilden, Germany)
Elgendy-2021	qPCR	Stool samples collected from patients before initiation of therapy and stored immediately after collection in screw cap sterile containers at -70°C	At -70°C	QIAamp® DNA Stool mini kit (Qiagen GmbH, Germany. Cat. No.12830-50) according to the manufacturer's protocol
Galluzzo-2021	16S rRNA V3-V4	Faecal samples were collected in tubes containing RNA Later and maintained at 4 °C within 24 h of receipt	NA	Metagenomic DNA was extracted using the QIAmp DNA Stool Mini Kit (Qiagen, West Sussex, UK), following the manufacturer's instructions
Levi-2021	Metagenomics	Collected samples were immediately stored in a home freezer (−20°C), and transferred in a provided cooler to our facilities where it was stored at −80°C (−20°C for OMNIgene-GUT kits) until DNA extraction	At -80°C	PowerMag Soil DNA isolation kit (MoBio) optimized for Tecan automated platform.

Mekky-2021	qPCR	Stool specimens were collected, kept in the freezer upon defecation at home, and within the same day delivered to our laboratory frozen, where aliquots of each specimen were frozen at 80 °C	At -80°C	ISOLATE Fecal DNA Kit (Bioline, UK) according to the manufacturers' instructions
Mirza-2021	Metagenomics	Stool was collected and shipped on ice, then stored at -80°C	At -80°C	Zymo Quick-DNA Fecal/Soil Microbe Miniprep Kit (D6010).
Pellizoni-2021	16S rRNA V3-V4	stool samples were requested and delivered within five days	At -80°C	QIAamp DNA Stool Mini Kit (QIAGEN, Hilden, Germany), according to the manufacturer's instructions
Sterlin-2021	16S rRNA V3-V4	Stool samples were collected in a container including a reagent for the generation of an O ₂ -depleted and CO ₂ -enriched atmosphere (Anaerocult band, Mikrobiologie), aliquoted in an anaerobic atmosphere, and stored at -80°C.	At -80°C	Genomic DNA was extracted from whole stool samples as previously described
Tremlett-2021	16S rRNA V3-V4	The same collection kits were used for all participants, with stool shipped on ice before -80°C storage in the central laboratories	At -80°C	Zymo Quick-DNATM Fecal/Soil Microbe Miniprep Kit (D6010)
Ascanelli-2022	16S rRNA V3-V4	NA	NA	Repeated bead-beating plus column method
Bruijstens-2022	16S rRNA V3-V4	These samples were compiled at home using gut microbiome DNA collection kits from OMNIgene•GUT (DNA Genotek, Ottawa, Ontario, Canada) with stabilizing agent included and were sent through regular mail to the Erasmus University Medical Center	At -80°C	Microbial DNA was extracted from the stool samples and 16S ribosomal RNA gene sequencing of the V3 and V4 variable regions was performed on an Illumina MiSeq sequencer

Cantoni-2022	16S rRNA V1-V3	Stools were self-collected and placed on frozen gel packs and shipped overnight to the research laboratory. Upon receipt, stools were immediately stored at -80 °C	At -80°C	MOBIO PowerSoil DNA Extraction kit
Zhou-2022	16S rRNA V4	Participants were provided with a stool sample collection kit and instructed to obtain two consecutive stool samples in the privacy of their own homes. Each stool sample time point included 3 collection vials - a Q-tip (Q, dry), a snap frozen vial (S, wet), and a vial filled with Luria-Bertani broth and 30% glycerol. Participants were instructed to freeze the samples for at least 12 h and ship them frozen with the ice pack included in the kit. Samples were returned to each site via overnight shipping in a thermal envelope.	At -80°C	QIAamp PowerFecal DNA Kit (ref 12830-50) or on a QIAcube platform according to the protocols generated by the manufacturer (QIAGEN)
Moles-2022	16S rRNA	Participants were instructed about stool collection and transport. Fecal samples were immediately frozen at -20°C and were subsequently transported to the hospital protected with a cold accumulator. Once in the center, samples were stored at -80°C	At -80°C	QIAamp DNA Stool Mini Kit (Qiagen, Germany)
Navarro-López-2022	16S rRNA V3-V4	Stool samples were obtained from all the participants and were immediately frozen and stored at -80 °C	At -80°C	MagnaPure Compact System (Roche Life Science, Mannheim, Germany)

Troci-2022	16S rRNA V1-V2	NA	NA	QIAamp DNA fast stool mini kit automated on the QIAcube (Qiagen, Hilden, Germany)
Elsayed-2023	16S rRNA V4	The fecal samples were collected in a self-collection fecal sample kit were returned in a boxed frozen cold pack to laboratory where they were divided into aliquots	At -80°C	PowerLyzer PowerSoil DNA Isolation Kit (MoBio Laboratories, Inc., Carlsbad, CA) by following the manufacturer's protocol
Nitzan-2023	16S rRNA V3-V4	Fecal samples were obtained using a stool preservative tube (Norgen Biotek, Thorold, ON, Canada), frozen immediately at arrival at clinic, and kept at -80°C	At -80°C	QIAamp® PowerFecal® Pro DNA kit (Qiagen, Tegelen, The Netherlands), according to manufacturer's protocol.
Thirion-2023	Metagenomics	Stools were collected according to International Human Microbiome Standards (IHMS) guidelines (SOP 03 V1) in kits at home and immediately stored at -20 °C until they were transported on dry ice and frozen 4–24 h later at -80°C in plastic tubes	At -80°C	aliquot of fecal samples was performed following IHMS SOP P7 V2
Vacaras-2023	16S rRNA V1-V3 /V3-V4	fecal samples were collected using special stool containers, and were stored at minus 20 degrees Celsius and then shipped to the laboratory for the DNA extraction	At -20°C	NA
Schoeps-2024	16S rRNA V4	The participant's first stool of the day was collected by a parent and shipped overnight on ice to the University of California, San Francisco and stored at -80°C	At -80°C	Modified cetyltrimethylammonium bromide (CTAB) buffer based protocol

Liu-2023	16S rRNA V3-V4	All fresh fecal samples obtained from the participants within a sterile box were immediately transported (dry ice was used during transportation) to the laboratory and stored at -80 °C	At -80°C	DNA extraction kit (QIAamp PowerFecal Pro-DNA Kit (50), 51,804), according to the manufacturer's protocol
----------	----------------	--	----------	---

Supplementary Table 6. Results of subgroup analyses of different study regions

The subgroup analysis of geographical distribution of study populations was performed via comparing countries in the East and West. Eastern countries comprise East and South Asian nations, while Western countries encompass North America, Europe, and the Middle East.

Alpha diversity metrics	Region of study	Pooled results		Heterogeneity	
		SMD (95% CI)	P values	I ²	P values
Observed species	East	-0.15 (-0.41 to 0.11)	0.27	71	<0.01
	West	-0.21 (-0.77 to 0.35)	0.46	85	<0.01
Chao1	East	-0.23 (-0.47 to 0.02)	0.07	79	<0.01
	West	-0.36 (-0.83 to 0.12)	0.02	46	<0.01
ACE	East	-0.21 (-0.63 to 0.21)	0.32	83	<0.01
	West	-0.56 (-1.21 to 0.09)	0.09	66	0.05
Shannon index	East	-0.27 (-0.47 to -0.07)	0.01	72	<0.01
	West	0.08 (-0.10 to 0.27)	0.38	69	<0.01
Simpson index	East	0.02 (-0.26 to 0.31)	0.87	80	<0.01
	West	0.15 (-0.19 to 0.49)	0.38	60	0.01

SMD, standardised mean difference; CI, confidence interval

Supplementary Table 7. Results of subgroup analyses of studies with patients on treatment or treatment naive studies

The subgroup analysis of use of immunotherapy was performed via comparing patients receiving treatment and those without it. Studies where at least 80% of patients received immunotherapy were classified as having treated patients.

Alpha diversity metrics	Immunotherapy	Pooled results		Heterogeneity	
		SMD (95% CI)	P values	I ² (%)	P values
Observed species	On treatment*	0.12 (-0.21 to 0.45)	0.47	58	0.04
	Treatment naive	-0.31 (-0.62 to 0.00)	0.05	80	<0.01
Chao1	On treatment*	-0.11 (-0.41 to 0.20)	0.49	65	<0.01
	Treatment naive	-0.34 (-0.58 to -0.09)	<0.01	75	<0.01
ACE	On treatment*	-0.12 (-0.82 to 0.58)	0.73	-	-
	Treatment naive	-0.32 (-0.69 to 0.06)	0.10	82	<0.01
Shannon index	On treatment*	0.14 (-0.17 to 0.45)	0.38	74	<0.01
	Treatment naive	-0.25 (-0.41 to -0.10)	<0.01	68	<0.01
Simpson index	On treatment*	0.24 (-0.01 to 0.50)	0.06	44	0.06
	Treatment naive	-0.07 (-0.38 to 0.24)	0.66	81	<0.01

SMD, standardised mean difference; CI, confidence interval. * Studies with patients on treatment are those in which 80% or more of patients are receiving immunotherapy.

Supplementary Table 8. Results of sensitivity analyses by excluding studies with low quality (Newcastle-Ottawa Scale ≤ 5)

Alpha diversity metrics	Pooled results		Heterogeneity	
	SMD (95% CI)	<i>P</i> values	<i>I</i> ²	<i>P</i> values
Observed species	-0.22 (-0.48 to 0.04)	0.10	77	<0.01
Chao1	-0.31 (-0.51 to -0.11)	<0.01	73	<0.01
ACE	-0.31 (-0.72 to 0.10)	0.13	84	<0.01
Shannon index	-0.08 (-0.24 to 0.07)	0.31	76	<0.01
Simpson index	0.12 (-0.13 to 0.38)	0.33	77	<0.01

SMD, standardised mean difference; CI, confidence interval

Supplementary Table 9. Results of sensitivity analyses by excluding studies without matching any variables

Alpha diversity metrics	Pooled results		Heterogeneity	
	SMD (95% CI)	<i>P</i> values	I ²	<i>P</i> values
Observed species	-0.13 (-0.35 to 0.09)	0.24	69	<0.01
Chao1	-0.26 (-0.45 to -0.07)	<0.01	69	<0.01
ACE	-0.21 (-0.59 to 0.18)	0.29	81	<0.01
Shannon index	-0.11 (-0.27 to 0.05)	0.17	75	<0.01
Simpson index	0.12 (-0.13 to 0.37)	0.34	77	<0.01

SMD, standardised mean difference; CI, confidence interval

Supplementary Table 10. Publication bias assessment by egger's regression test in alpha diversity

Alpha indexes	t	df	<i>P</i>-value
Observed species	-1.21	19	0.24
ACE	0.22	11	0.83
Chao1	0.44	26	0.66
Shannon index	0.47	42	0.64
Simpson index	-0.81	25	0.42

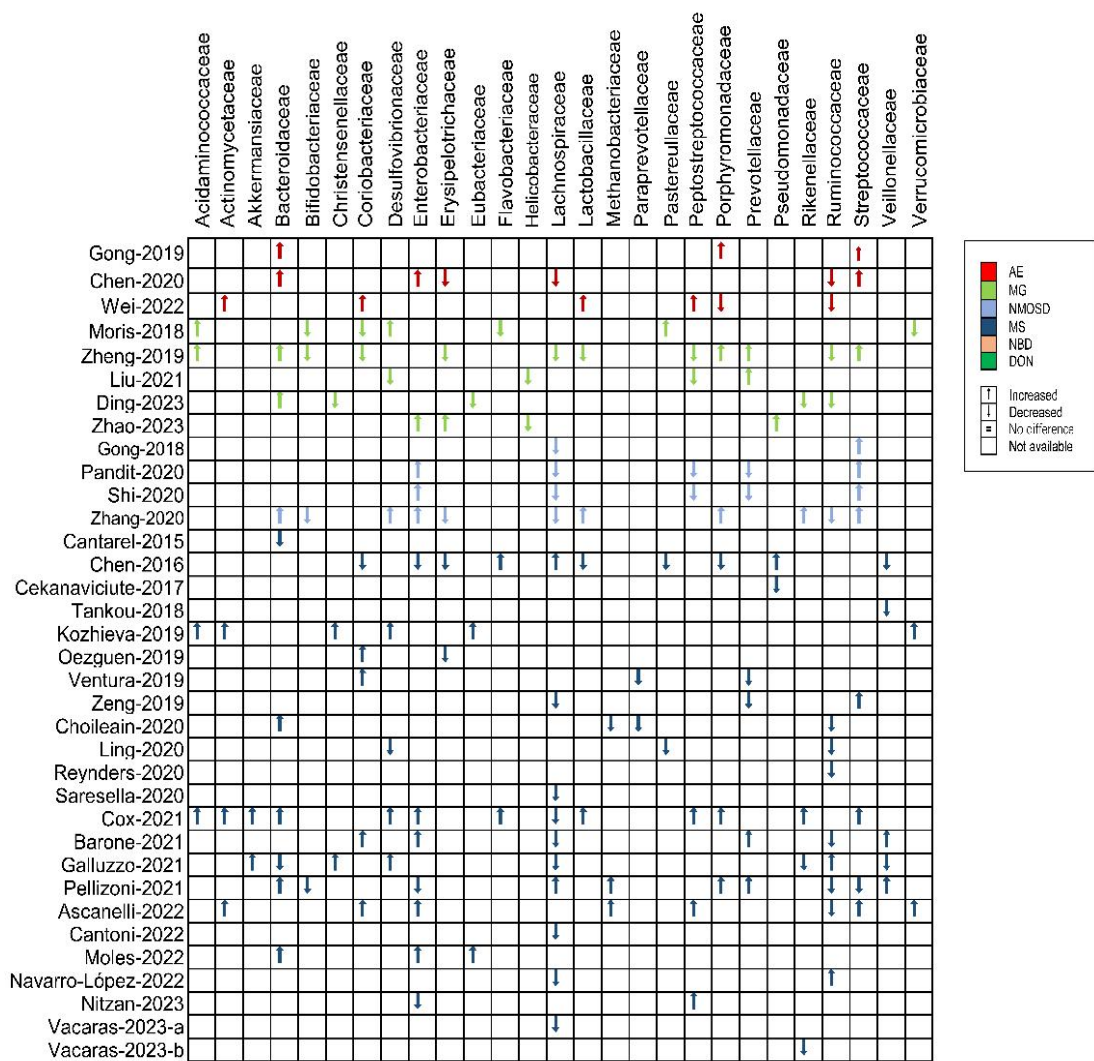

Supplementary Figure 1. Funnel plots of publication bias assessment in alpha diversity

Supplementary Figure 2. Figures for study-level findings of relative abundance of gut microbes

A. Level: phylum

B. Level: family

C. Level: genus
