Contents

Table S1. Full names and abbreviations of VOCs

Table S2. Distribution of the selected VOCs.

Table S3. Multiple linear regression between individual VOCs and CMI.

Table S4. WQS model regression between mixed VOCs and CMI.

Table S5. Subgroup analysis for association between VOCs and CMI.

Fig. S1. Spearman correlation of VOCs.

Fig. S2. BKMR analysis on VOCs exposure and CMI.

Fig. S3. The univariate exposure-response function (95% CI) between the concentration of selected chemicals and CMI.

Fig. S4. Combined effect of VOCs on CMI in Q-gcomp regression.

Fig. S5. Multiple comparison results using FDR.

Table S1. Full names and abbreviations of VOCs

Variables	Full name
2MHA	2-methylhippuric acid
3-4MHA	3- and 4-methylhippuric acid
AAMA	N-acetyl-S-(2-carbamoyl-ethyl)-l-cysteine
AMCC	N-acetyl-S-(N-methylcarbamoyl)-l-cysteine
ATCA	2-aminothiazoline-4-carboxylic acid
SBMA	N-acetyl-S-(benzyl)-l-cysteine
BPMA	N-acetyl-S-(n-propyl)-l-cysteine
CEMA	N-acetyl-S-(2-carboxyethyl)-l-cysteine
CYMA	N-acetyl-S-(2-cyanoethyl)-l-cysteine
DHBMA	N-acetyl-S-(3,4-dihydroxybutyl)-l-cysteine
2HPMA	N-acetyl-S-(2-hydroxypropyl)-l-cysteine
3HPMA	N-acetyl-S-(3-hydroxypropyl)-l-cysteine
MA	mandelic acid
MHBMA3	N-acetyl-S-(4-hydroxy-2-butenyl)-l-cysteine
PGA	phenylglyoxylic acid
HMPMA	N-acetyl-S-(3-hydroxypropyl-1-methyl)-l-cysteine

Table S2. Distribution of the selected VOCs.

Variables	Min	P5	P10	P25	P50	P75	P90	P95	Max	LOD
2MHA	3.54	3.54	5.6	12.55	30.6	78.55	162.2	222	1660	91.5

CI, confidence interval, P-int, p for interaction. The model was adjusted for age, gender, race, educational levels, and family income ratio, alcohol, smoking, hypertension,

diabetes, BMI, serum cotinine, LDL, and total cholesterol.

Fig. S1. Spearman correlation of VOCs.

Fig. S2. BKMR analysis on VOCs exposure and CMI. The impact of a single VOC, when the single VOC is in the 75th percentile and the 25th percentile, on the potential continuous outcome of CMI, while all VOCs are in the 25th, 50th, or 75th percentile. "Est" is defined as the association between a single VOC and the potential continuous outcome.

Fig. S3. The univariate exposure-response function (95% CI) between the concentration of selected chemicals and CMI was determined while keeping the concentration of other chemicals at the median.

Fig. S4. Combined effect of VOCs on CMI in Q-gcomp regression. (A) The weight of bidirectional mixed effects. (B) The linear relationship between VOC mixed exposure and CMI.

Fig. S5. Multiple comparison results using FDR.
