

**Table 1.** Minimum Inhibitory Concentrations (MICs) ( $\mu\text{g/ml}$ ) of amoxicillin, azithromycin, ceftriaxone, and doxycycline against *Borrelia burgdorferi* strain B31 (ATCC 35210). MIC values refer to planktonic spirochetes cultured under standard conditions.

| Antibiotic   | MIC ( $\mu\text{g/ml}$ ) |
|--------------|--------------------------|
| Amoxicillin  | 0.5                      |
| Azithromycin | 0.03                     |
| Ceftriaxone  | 0.064                    |
| Doxycycline  | 0.25                     |
