

A**B****C**

Supplementary Figure 5. The antagonistic activity of *P. aeruginosa* against Bcc species in mixed planktonic communities. (A) Survival of 41 strains representing nine Bcc species after 24 h in mixed cultures in LB medium with *P. aeruginosa* PA14 where Bcc viability is represented by green (alive) or red (dead) squares. Growth dynamics of representative sensitive (B) and semi-tolerant (C) Bcc strains from panel A in monoculture (blue line) or in co-culture with *P. aeruginosa* (strain PA14; red line) in shaken flasks for 24 h in LB medium. Bcc viability was monitored by CFU counts on selective agar-containing media. Data reported represent the mean $\pm$ SD of three replicates. *B.m*, *B. multivorans*; *B.c*, *B. cenocepacia*; *B.d*, *B. dolosa*.
