

1 **Supplemental Table 1.** The raw data for root lengths for Figure 1. Three-day-old rice
 2 seedlings were treated with a 0.5 mM CaCl₂ solution with or without 50 µM Al under
 3 ambient or elevated CO₂ for 24 h (pH 4.5). Root length was measured before and after
 4 treatment.

21
22 **Supplemental Figure 1.** Effects of elevated CO_2 on the relative root growth of
23 ‘Kasalath’ (Kas) (A) and ‘Nipponbare’ (Nip) (B). Three-day-old rice seedlings were
24 treated with 0.5 mM CaCl_2 solution with or without 10 μM La under ambient (400
25 $\mu\text{L}\cdot\text{L}^{-1}$; CK) or elevated (600 $\mu\text{L}\cdot\text{L}^{-1}$; CO_2) CO_2 for 24 h. Root length was measured
26 before and after treatment. Data are means \pm SD ($n = 10$). Columns with different
27 letters are significantly different at $P < 0.05$.

28

29
30 **Supplemental Figure 2.** Effects of elevated CO_2 treatment on the expression of
31 *OsSTAR1* in Kas. Three-day-old rice seedlings were treated with 0.5 mM CaCl_2
32 solution with or without 50 μM Al under ambient ($400 \mu\text{L}\cdot\text{L}^{-1}$; CK) or elevated (600
33 $\mu\text{L}\cdot\text{L}^{-1}$; CO_2) CO_2 for 24 h. The root apex was excised for RNA extraction.
34 Expression levels of plants grown in ambient CO_2 were assigned an expression level
35 of 1. Data are means \pm SD ($n = 4$). Columns with different letters are significantly
36 different at $P < 0.05$.
