

Supplementary Material
Hormones and Fitness: Evidence for trade-offs in glucocorticoid regulation across contexts

Maren N. Vitousek*, Conor C. Taff, Kelly K. Hallinger, Cedric Zimmer, David W. Winkler

*Correspondence: mnv6@cornell.edu

Supplementary Figures:

Figure S1: Scatterplot of the relationship between baseline corticosterone and the acute stress-induced increase in corticosterone in incubating female tree swallows. The dotted box shows the portion of the distribution illustrated by the surface plot of glucocorticoids and reproductive success (Figure 1).

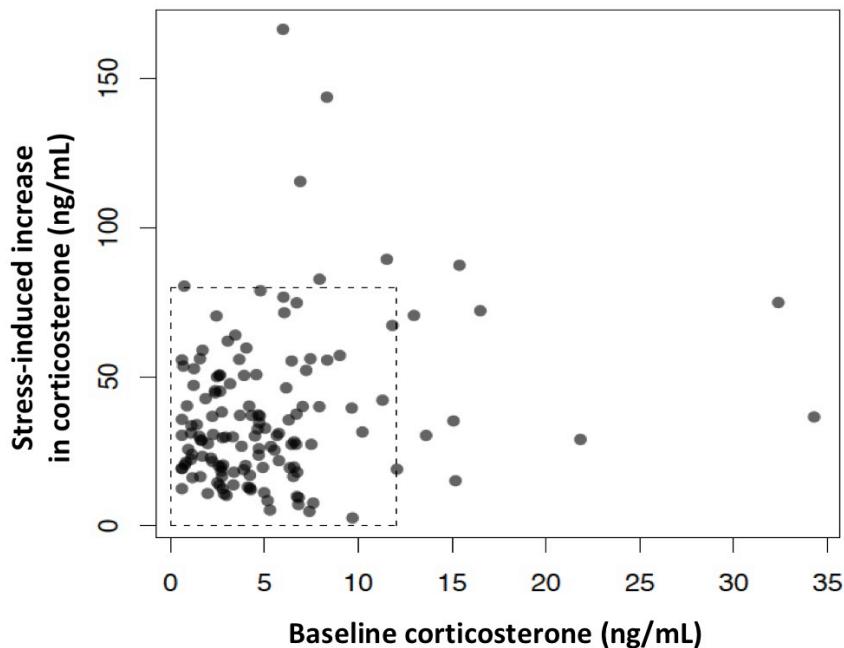

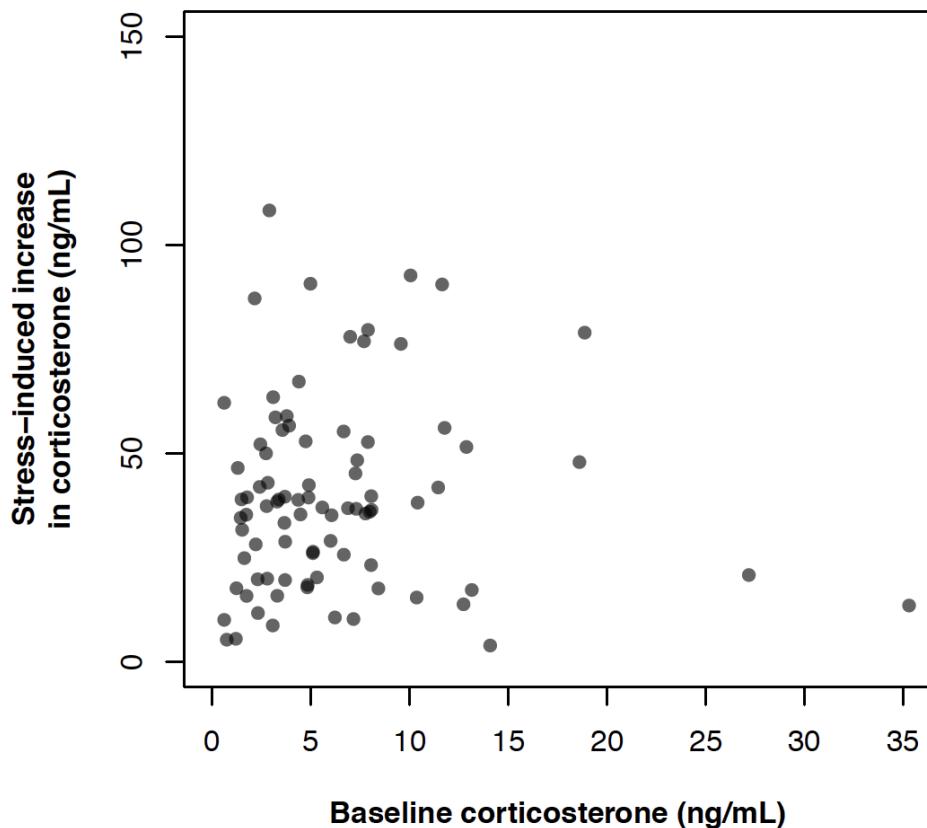

Figure S2: Scatterplot of the relationship between baseline corticosterone and the acute stress-induced increase in corticosterone in provisioning male tree swallows.

Supplementary Tables: Variables are abbreviated as follows in all tables: “Date”=Clutch initiation date, “Condition”=Scaled body mass index, “Temp”=Daily mean temperature throughout the incubation period (for model sets that use incubation period data) or nestling provisioning period (for model sets that use nestling provisioning period data), “Base”=Baseline corticosterone, “Stress”=The acute stress-induced increase in corticosterone or circulating stress-induced corticosterone levels (specified for each table). More detail on each of these measures is provided in the methods section.

Table S1: Candidate models of clutch size in female tree swallows.

Clutch size in incubating females. Candidate models use the stress-induced increase in corticosterone as a measure of the stress response.

Table S5: Parameter estimates for models of survival probability in provisioning female tree swallows.

Models use the stress-induced increase in corticosterone as a measure of the stress response.

Ranked Model	$\beta \pm SE$		
	Stress	Condition	Age
1. Stress	-0.013 ± 0.008		
2. Stress + Condition	-0.012 ± 0.008	0.12 ± 0.09	
3. Condition		0.14 ± 0.09	
4. Stress + Age	-0.011 ± 0.008		0.12 ± 0.11
5. Condition + Age		0.13 ± 0.09	0.14 ± 0.11
6. Age			0.15 ± 0.11

Models use circulating stress-induced corticosterone as a measure of the stress response.

Model	$\beta \pm SE$		
	Stress	Condition	Age
1. Stress	-0.013 ± 0.008		
2. Stress + Condition	-0.012 ± 0.008	0.12 ± 0.09	
3. Condition		0.14 ± 0.09	
4. Stress + Age	-0.012 ± 0.008		0.13 ± 0.11
5. Condition + Age		0.13 ± 0.09	0.14 ± 0.11
6. Age			0.15 ± 0.11
