1 Supplementary Figures and Tables

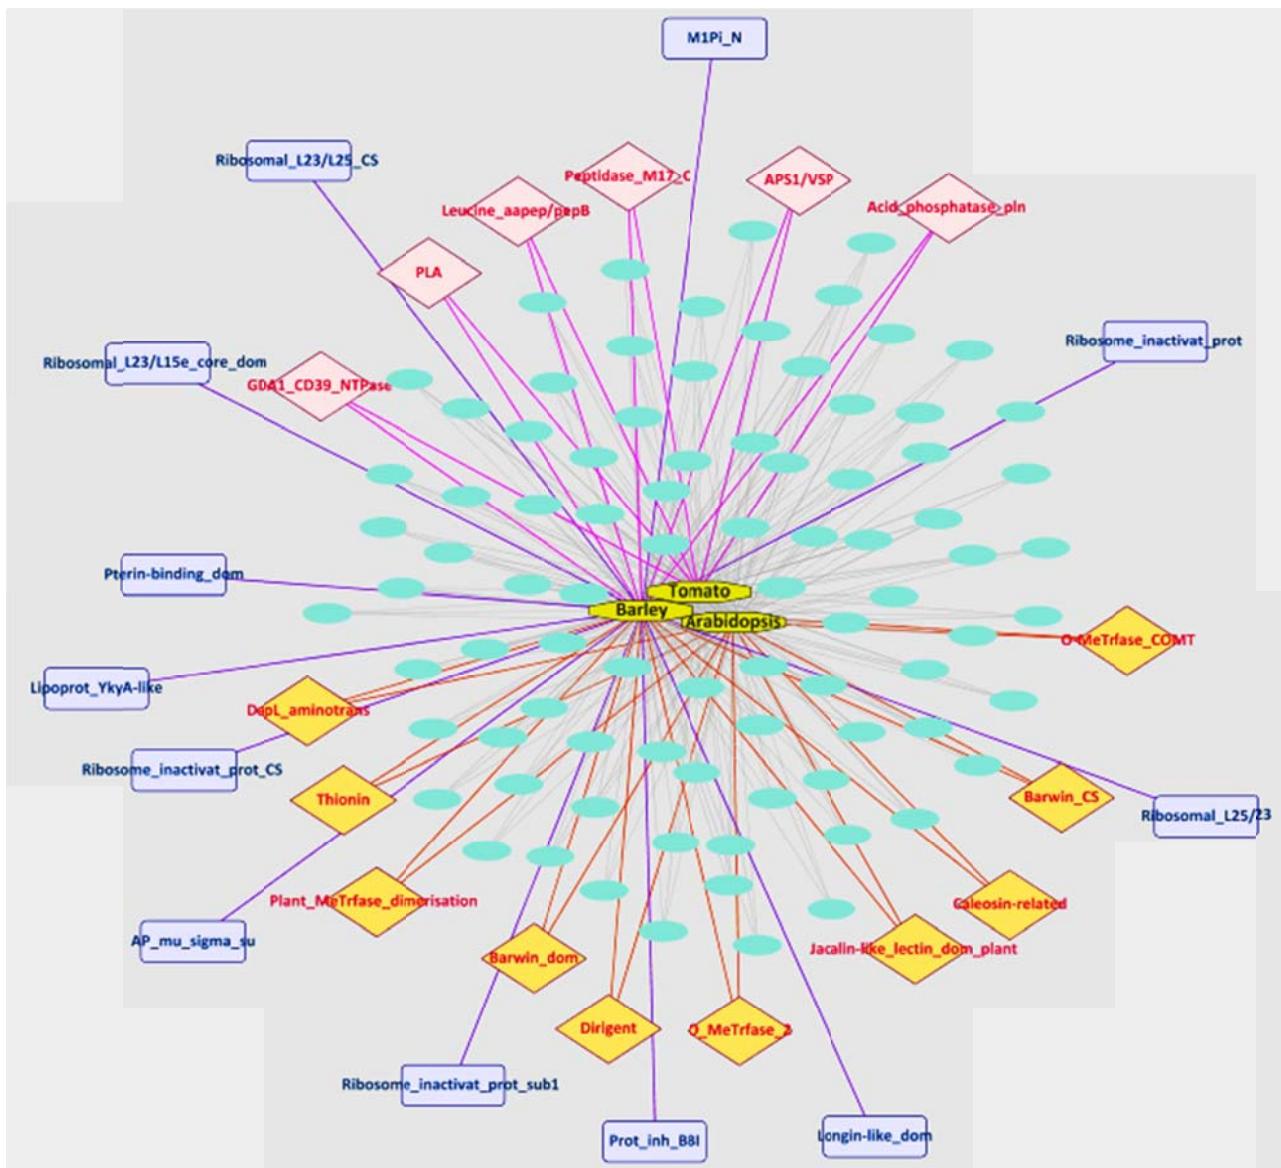

1.1 Supplementary Figures

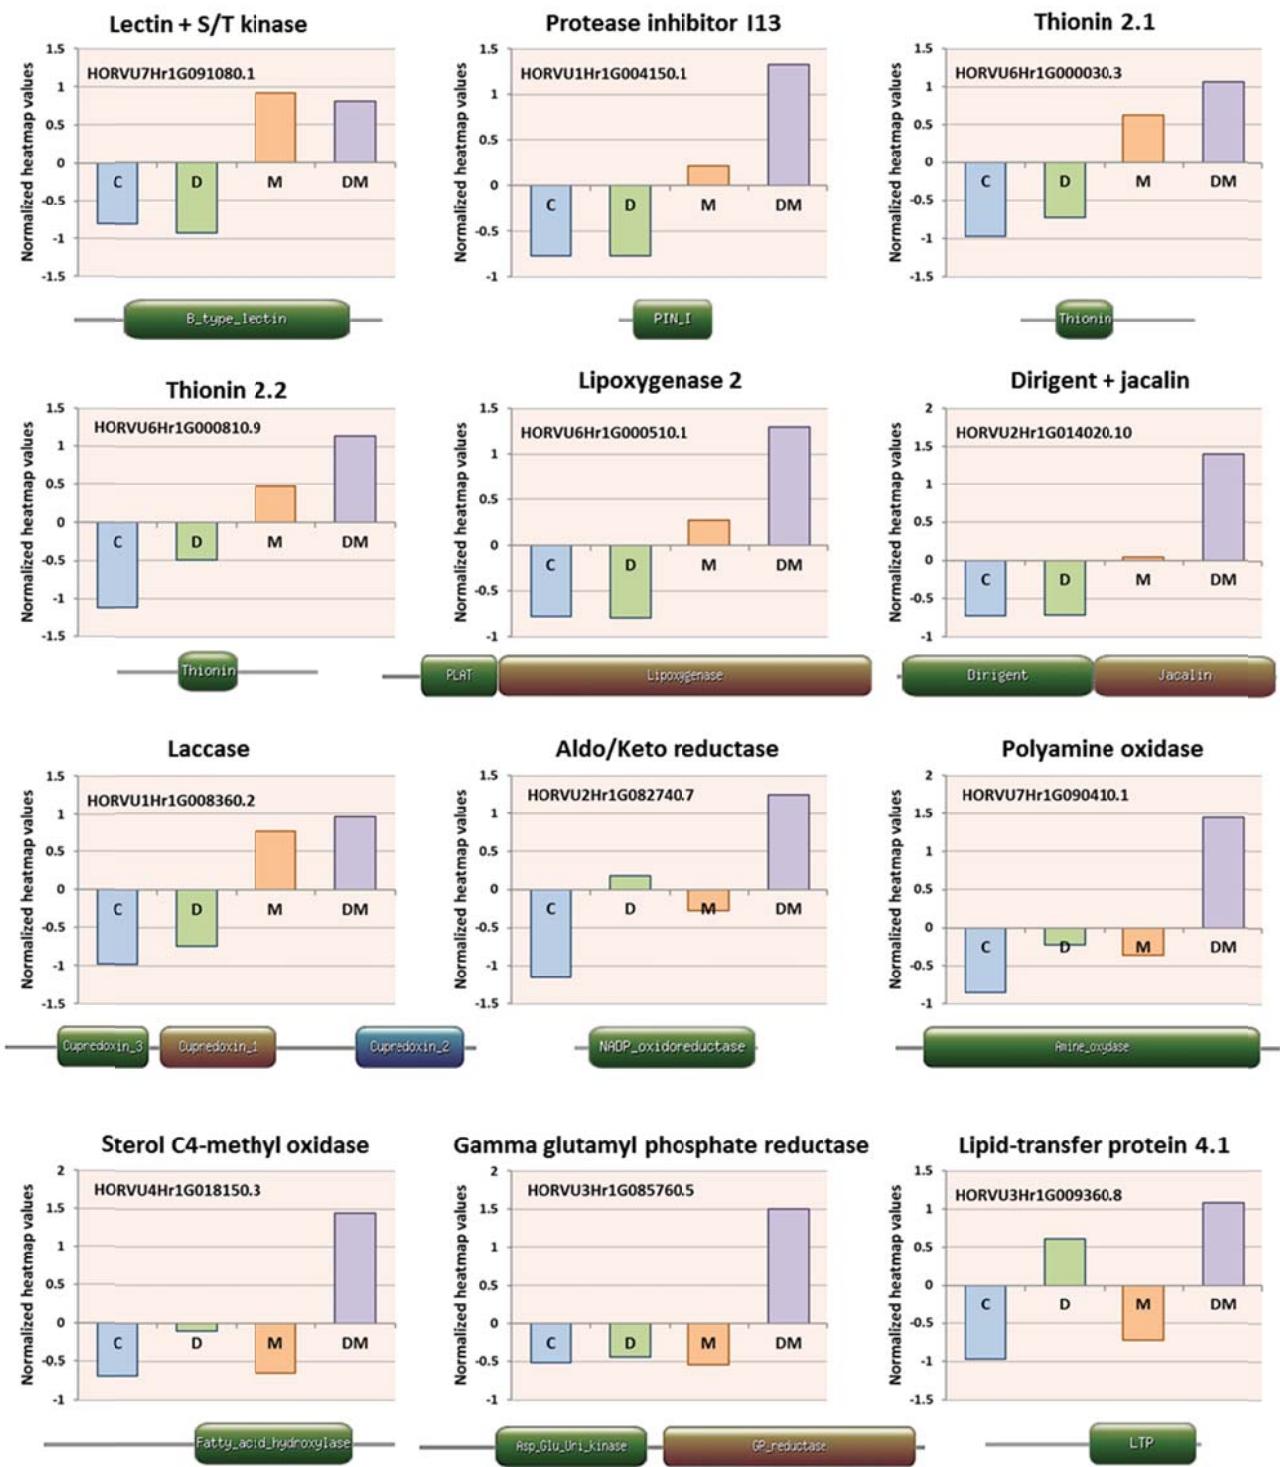

Supplementary Figure 1. Phenotype of barley plants 0, 4, 7, 10 and 13 days post treatment. Control (C), mites (M), dehydration (D) and dehydration + mites (DM).

Supplementary Figure 2. Venn diagrams showing the number of specific and shared differential expressed genes among the different treatments and non-treated plants. **(A)** Total number of DEGs. **(B)** Up-regulated DEGs. **(C)** Down-regulated DEGs.

Supplementary Figure 3. Network showing the conservation of Interpro identifiers from DEGs after mites treatment in barley in the DEGs after mites treatment in tomato and Arabidopsis. Unique barley identifiers (purple), shared barley and tomato identifiers (pink), shared barley and Arabidopsis identifiers (orange), shared barley, tomato and Arabidopsis identifiers (blue-green).

Supplementary Figure 4. RNA-seq expression of the selected DEGs after the different treatments. Values were normalized as heatmap values (see Figure 3). C, control. D, dehydration. M, mites. DM, dehydration and mites. A schematic representation of each gene showing the Interpro domains identified is located under the expression graphics.

1.2 Supplementary Tables

Supplementary Table 1. Primer sequences used for the amplification of barley genes by RT-qPCR assays.

Gene ID	Description	Primer name	Sequence (5' → 3')
<i>Hv1Hr1G004150</i>	Protease inhibitor I13	Hv1Hr1G004150-F	TCAAGGACATGCCCTGAAGTG
		Hv1Hr1G004150-R	CGACAGTGTCAACGAGGATG
