

Table S3. The standard values for MIC interpretive criteria.

Antimicrobial class	Antimicrobial agent	MIC (µg/ml) Interpretive Criteria		
		S	I	R
β-lactam rings	Ampicillin	≤8	16	≥32
Macrolides	Azithromycin	≤2	-	-
Tetracyclines	Doxycycline	≤4	8	≥16
Folate pathway inhibitors	Trimethoprim (TMP) and Sulfamethoxazole (SXT)	≤2	-	≥4
Phenicol	Chloramphenicol	≤8	16	≥32

S – susceptible, I – intermediate, and R – resistant; data from (CLSI, 2018).
