

## Supporting Statistical Results

### Thermoregulatory requirements shape mating opportunities of male proboscis bats

Luke R. Wilde, Linus Günther, Frieder Mayer, Mirjam Knörnschild, Martina Nagy

#### ANOVAs on one principal component extracted from daily minimum, maximum and mean roost site temperatures

Results of one-way ANOVAs (River Station and Casa Grande) and two-way ANOVAs (Cabina 5R/L) testing the effect of roost site (site) and, if applicable, season (dry/mating season and wet/non-mating season) on one principal component (PC1) extracted from daily minimum, mean, and maximum temperature.

| Roost/Social group                          | Factor | df | Sum of Squares | Mean Squares | F-value | p-value | α-level |
|---|--------|----|----------------|--------------|---------|---------|---------|
| River Station 2016<br>n=31 days             | Site   | 3  | 18.30          | 6.10         | 6.99    | <0.001  | 0.008   |

## **R output for GLMM 1 (Fig 2a):**

Temperature data set: iButton data from October 2015 (CL, CR) and June-July 2016 (CL, CR. CG, RS)

Site use data set: October 2015 (CL, CR), June-July 2016 (CL, CR. CG, RS)

**Dependent variable:** proportion of bats in alternate roost sites:

y1<-cbind(BatsNonPref1,BatsPref1)

**Fixed effects:**

AverageTemp1: daily mean temperature

Season1: Mating period (MP) = dry season = 2015, non-mating period (NMP) = wet season = 2016

Roost1: CL, CR, CG, RS

**Random Effect:**

Observation level random effect: RanDate1<-1:length(Date1)

**Generalized linear mixed model fit by maximum likelihood (Laplace Approximation)**

**[*'glmerMod'*]**

**Family: binomial ( logit )**

Formula: y1 ~ AverageTemp1 + Season1 + Roost1 + (1 | RanDate1)

| AIC   | BIC   | logLik | deviance | df.resid |

### R output for GLMM 2 (Fig. 2b):

Site use data set: April - December 2013 and April – November 2014 (CL and CR)

Temperature data set: maximum air temperature at La Selva during April - December 2013 and April – November 2014

**Dependent variable:** proportion of bats in alternate roost sites:

y<-cbind(BatsNonPref,BatsPref)

**Fixed effects:**

Tmax: daily maximum air temperature at La Selva

Season: Mating period (MP), non-mating period (NMP)

Group: CL, CR

**Random effects:**

Year (2013, 2014)

Observation level random effect: RanDate<-1:length(Date)
