Supplementary Figures and Tables:

Supplementary Figure 1. Phylogenetic analysis of flower homeotic genes from different plant species. *Vitis vinifera vinifera* (Vvi) ABCDE amino acid sequences were deduced using the cDNA sequence of gene ID from CRIBI (<http://genomes.cribi.unipd.it/grape/>) and translated using the ExPASy translate tool (<http://web.expasy.org/translate/>). Phylogenetic analysis of homeotic genes protein sequences was performed with the Maximum Likelihood method through MEGA (Molecular Evolutionary Genetics Analysis) version 6. The bootstrap consensus tree was inferred from 1000 replicates and represents the evolutionary history of the protein analyzed. (A) APETALA1 (AP1) and APETALA2 (AP2); (B) APETALA3 (AP3), TOMATO MADSBOX6 (TM6) and PISTILLATA (PI); (C) AGAMOUS (AG), SHATTERPROOF (SHP) and SEEDSTICK (SKT); (D) SEPALLATA 1 and 3. Am - *Antirrhinum majus*; At - *Arabidopsis thaliana*; Ci - *Citrus sinensis*; Cm - *Castanea mollissima*; Cs - *Cucumis sativus*; Md - *Malus domestica*; Os - *Oryza sativa*; Ph - *Petunia hybrida*; Pt - *Populus trichocarpa*; Pp - *Prunus persica*; Pr - *Pinus radiata* Qs - *Quercus suber*; Sl - *Solanum lycopersicum*; Vvi - *Vitis vinifera vinifera*. Accession numbers for amino acids sequences are presented in Supplementary Table 2 and 3.

Supplementary Figure 2. Protein sequence and alignment of VIT_204s0023g02820 and VIT_218s0001g13460. Protein sequence and alignment of the *VviAP3* genes according to Expasy translation tool (<http://web.expasy.org/translate/>) using the cDNA sequence from CRIBI (<http://genomes.cribi.unipd.it/grape/>) for both genes annotated as *VviAP3*. It is possible to observe that the *VviAP3* with the ID VIT_218s0001g13460 display the C-terminal sequence DLTFTLLE while the *VviAP3* with the ID VIT_204s0023g02820 display the C-terminal sequence DLRLA corresponding to the euAP3 and paleoAP3 lineage, respectively.

Supplementary Figure 3. Protein sequence alignment of *SHATTERPROOF* genes from *Vitis* (*Vvi*) and *Arabidopsis* (*At*). (A) The alignment between *VviSHP1* (VIT_212s0142g00360) and *AtSHP1* revealed an amino acid identity of 70%. (B) The alignment between *VviSHP1* and *AtSHP2* revealed an amino acid identity of 82%. The *VviSHP1* is closer to *AtSHP2* than to *AtSHP1*.

Supplementary Table 1. Time of probe hydrolysis at 60° C according to the fragment size. F, forward primer; R, reverse primer. The template length includes the sequence from the T7 or SP6 binding site to the polylinker.
