

Table S2. Stocking of main conifers species and hardwood regeneration, 10 years after cutting (mean \pm standard error). Expected values assume the random distribution of seedlings and a density distribution following a Poisson distribution. Paper birch (*Betula papyrifera* Marsh) and aspen (*Populus tremuloides* Michx) were grouped as intolerant hardwoods.

Stand type	Period	Treatment	Stocking							
			Black spruce		Balsam fir		Softwoods		Hardwoods	
			Measured	Expected	Measured	Expected	Measured	Expected	Measured	Expected
