

Supplementary Figure 3. CD8⁺ T cell recognition of previously defined influenza virus epitopes in PBMC of HLA matched subjects. Test results using the specified peptides (A) PB1₅₉₁₋₅₉₉, (B) NP₄₄₋₅₂, (C) M1₅₈₋₆₆, (D) PA₄₆₋₅₄, (E) NP₉₁₋₉₉, (F) NP₃₄₂₋₃₅₁, (G) NP₂₆₅₋₂₇₃, (H) M1₁₃₋₂₁, (I) NP₄₁₈₋₄₂₆, (J) NP₃₈₀₋₃₈₈, (K) NP₃₈₃₋₃₉₁ and (L) M1₁₂₈₋₁₃₅ along with the previously defined HLA restriction are indicated. Each data point (dot) within the panel represents the number of IFN- γ SFU elicited by that peptide in a donor bearing the corresponding HLA class I allele. The peptides are part of the CEF peptide pool, and the original references are listed in Currier et al., J. Immunol. Methods, 2001, 260:157-172.
