

Supplementary Material

1 Supplementary Tables

SUPPLEMENTARY TABLE S1 | List of 50 plant species/varieties exposed to water deficit treatment in one of two glasshouse experiments. The family, growth form, and origin (relative to Australia) are described for each species.

Species/Horticultural variety	Family	Growth Form	Origin
<i>Hardenbergia violacea</i> (Schneev.) Stearn	Fabaceae	Climber/Groundcover	Native
<i>Hibbertia scandens</i> (Willd.) Dryand.	Dilleniaceae	Climber/Groundcover	Native
<i>Kennedia becxiana</i> F.Muell.	Fabaceae	Climber	Native
<i>Kennedia prostrata</i> R.Br.	Fabaceae	Groundcover	Native
<i>Myoporum parvifolium</i> R.Br., var. <i>Purpurea</i>	Scrophulariaceae	Groundcover	Native
<i>Pandorea jasminoides</i> (Lindl.) K.Schum., var. <i>Jazzy Bellz</i>	Bignoniaceae	Climber	Native
<i>Trachelospermum asiaticum</i> (Siebold & Zucc.) Nakai	Apocynaceae	Climber/Groundcover	Exotic
<i>Cordyline australis</i> (G.Forst.) Endl., var. <i>Red Sensation</i>	Asparagaceae	Herb	Exotic
<i>Dianella caerulea</i> Sims, var. <i>Goddess</i>	Xanthorrhoeaceae	Herb	Native
<i>Liriope muscari</i> (Decne.) L.H.Bailey	Asparagaceae	Grass	Exotic
<i>Lomandra longifolia</i> Labill., var. <i>Verday</i>	Asparagaceae	Grass	Native
<i>Stenotaphrum secundatum</i> (Walter) Kuntze, var. <i>Sapphire</i>	Poaceae	Turf	Exotic
<i>Plectranthus argentatus</i> S.T.Blake	Lamiaceae	Herb	Native
<i>Zoysia macrantha</i> Desv., var. <i>Nara</i>	Poaceae	Turf	Native
<i>Acacia implexa</i> Benth.	Fabaceae	Tree	Native
<i>Agonis flexuosa</i> (Muhl. ex Willd.) Sweet, var. <i>Burgundy</i>	Myrtaceae	Shrub	Native
<i>Alectryon coriaceus</i> (Benth.) Radlk.	Sapindaceae	Tree	Native
<i>Alectryon oleifolius</i> (Desf.) Reynolds	Sapindaceae	Tree	Native
<i>Atractocarpus fitzalanii</i> (F.Muell.) Puttock	Rubiaceae	Tree	Native
<i>Backhousia citriodora</i> F.Muell.	Myrtaceae	Shrub	Native
<i>Backhousia myrtifolia</i> Hook. & Harv.	Myrtaceae	Shrub	Native
<i>Buckinghamia celsissima</i> F.Muell.	Proteaceae	Tree	Native
<i>Castanospermum australe</i> A.Cunn. & C.Fraser	Fabaceae	Tree	Native
<i>Correa</i> sp., var. <i>Catie Bec</i>	Rutaceae	Shrub	Native
<i>Cryptocarya laevigata</i> Blume	Lauraceae	Tree	Native
<i>Cryptocarya mackinnoniana</i> F.Muell.	Lauraceae	Tree	Native
<i>Cupaniopsis anacardioides</i> (A.Rich.) Radlk.	Sapindaceae	Tree	Native
<i>Delonix regia</i> (Hook.) Raf.	Fabaceae	Tree	Exotic
<i>Dysoxylum fraserianum</i> (A.Juss.) Benth.	Meliaceae	Tree	Native
<i>Ficus microcarpa</i> L.f., var. <i>Hillii</i>	Moraceae	Shrub	Native
<i>Flindersia australis</i> R.Br.	Rutaceae	Tree	Native
<i>Flindersia maculosa</i> (Lindl.) Benth.	Rutaceae	Tree	Native
<i>Grevillea baileyana</i> McGill.	Proteaceae	Tree	Native

SUPPLEMENTARY TABLE S1, cont.

Species/Horticultural variety	Family	Growth Form	Origin
<i>Hakea laurina</i> R.Br.	Proteaceae	Shrub	Native
<i>Hakea salicifolia</i> (Vent.) B.L.Burt	Proteaceae	Shrub	Native
<i>Harpullia pendula</i> Planch. ex F.Muell.	Sapindaceae	Tree	Native
<i>Hymenosporum flavum</i> F.Muell.	Pittosporaceae	Tree	Native
<i>Lophostemon confertus</i> (R.Br.) Peter G.Wilson & J.T.Waterh.	Myrtaceae	Tree	Native
<i>Magnolia grandiflora</i> L., var. Little Gem	Magnoliaceae	Tree	Exotic
<i>Melastoma affine</i> D.Don	Melastomataceae	Shrub	Native
<i>Murraya paniculata</i> (L.) Jack	Rutaceae	Shrub	Exotic
<i>Pittosporum tobira</i> (Thunb.) W.T.Aiton, var. Miss Muffet	Pittosporaceae	Shrub	Exotic
<i>Sarcopteryx stipata</i> (F.Muell.) Radlk.	Sapindaceae	Tree	Native
<i>Syzygium floribundum</i> F.Muell.	Myrtaceae	Tree	Native
<i>Syzygium luehmannii</i> (F.Muell.) L.A.S.Johnson	Myrtaceae	Tree	Native
<i>Syzygium wilsonii</i> (F.Muell.) B.Hyland	Myrtaceae	Shrub	Native
<i>Toeckia erythrocarpum</i> (F.Muell.) Radlk.	Sapindaceae	Tree	Native
<i>Tristaniopsis laurina</i> (Sm.) Peter G.Wilson & J.T.Waterh.	Myrtaceae	Tree	Native
<i>Tristaniopsis laurina</i> , var. Luscious	Myrtaceae	Tree	Native
<i>Xanthostemon chrysanthus</i> (F.Muell.) Benth.	Myrtaceae	Tree	Native

SUPPLEMENTARY TABLE S2 | Mean osmotic potential at full turgor (π_o , MPa), water potential at turgor loss point (π_{tlp} , MPa), relative water content at turgor loss point (RWC_{tlp}, percent), and bulk modulus of elasticity (ϵ , MPa) $\pm$ SE for 27 tree/shrub plus 2 liana species. Data was extracted from pressure-volume curves of leaves from well-watered plants ($n=1-10$ leaves per species).

Species/Horticultural variety	<i>n</i>	π_o (MPa)	π_{tlp} (MPa)	RWC _{tlp} (%)	ϵ (MPa)
<i>Alectryon coriaceus</i>	10	-1.60 $\pm$ 0.06	-1.83 $\pm$ 0.06	90.42 $\pm$ 1.00	17.42 $\pm$ 1.99
<i>Alectryon oleifolius</i>	1	-2.28	-2.33	94.73	34.23
<i>Atractocarpus fitzalanii</i>	1	-1.76	-1.89	94.11	11.55
<i>Backhousia citriodora</i>	7	-1.65 $\pm$ 0.08	-1.93 $\pm$ 0.05	89.17 $\pm$ 1.84	15.55 $\pm$ 1.63
<i>Backhousia myrtifolia</i>	2	-1.48 $\pm$ 0.51	-1.59 $\pm$ 0.52	93.28 $\pm$ 0.41	11.24 $\pm$ 2.38
<i>Buckinghamia celsissima</i>	3	-2.26 $\pm$ 0.08	-2.47 $\pm$ 0.09	94.01 $\pm$ 0.36	10.37 $\pm$ 0.88
<i>Callistemon 'King Park Special'</i>	2	-2.62 $\pm$ 0.18	-2.88 $\pm$ 0.15	94.11 $\pm$ 0.26	9.41 $\pm$ 1.26
<i>Castanospermum australe</i>	4	-1.14 $\pm$ 0.06	-1.36 $\pm$ 0.03	93.67 $\pm$ 0.10	6.16 $\pm$ 1.08
<i>Ceratopetalum apetalum</i>	4	-1.21 $\pm$ 0.09	-1.50 $\pm$ 0.04	89.30 $\pm$ 1.17	13.14 $\pm$ 0.78
<i>Corymbia citriodora</i>	1	-2.24	-2.49	93.46	8.53
<i>Cryptocarya laevigata</i>	2	-1.90 $\pm$ 0.27	-2.04 $\pm$ 0.34	93.88 $\pm$ 0.60	15.18 $\pm$ 5.15
<i>Cupaniopsis anacardioides</i>	2	-1.42 $\pm$ 0.06	-1.58 $\pm$ 0.04	93.96 $\pm$ 0.12	8.51 $\pm$ 0.89
<i>Dysoxylum fraserianum</i>	10	-1.66 $\pm$ 0.06	-2.06 $\pm$ 0.04	87.98 $\pm$ 0.97	16.30 $\pm$ 2.53
<i>Ficus brachypoda</i>	1	-1.54	-1.64	93.37	15.00
<i>Ficus microcarpa</i>	4	-1.31 $\pm$ 0.08	-1.49 $\pm$ 0.08	92.91 $\pm$ 1.35	15.61 $\pm$ 3.22
<i>Flindersia australis</i>	10	-1.34 $\pm$ 0.09	-1.80 $\pm$ 0.04	89.57 $\pm$ 1.00	13.00 $\pm$ 1.53
<i>Grevillea baileyana</i>	1	-2.24	-2.49	93.52	8.58
<i>Hakea laurina</i>	1	-2.00	-2.14	93.94	13.25
<i>Hardenbergia violacea</i>	6	-1.22 $\pm$ 0.13	-1.28 $\pm$ 0.13	93.65 $\pm$ 0.59	36.58 $\pm$ 10.00
<i>Harpullia pendula</i>	4	-1.93 $\pm$ 0.07	-2.02 $\pm$ 0.09	93.08 $\pm$ 0.54	21.70 $\pm$ 4.01
<i>Kennedia becxiana</i>	4	-1.11 $\pm$ 0.04	-1.22 $\pm$ 0.05	93.78 $\pm$ 0.24	11.03 $\pm$ 2.26
<i>Magnolia grandiflora</i>	4	-1.31 $\pm$ 0.02	-1.44 $\pm$ 0.03	93.21 $\pm$ 0.14	9.30 $\pm$ 0.75
<i>Syzygium floribundum</i>	1	-1.16	-1.30	93.84	7.66
<i>Syzygium luehmannii</i>	6	-1.27 $\pm$ 0.11	-1.73 $\pm$ 0.15	86.02 $\pm$ 2.42	5.95 $\pm$ 1.11
<i>Syzygium wilsonii</i>	1	-2.18	-2.23	94.28	32.85
<i>Toeckima erythrocarpum</i>	3	-2.21 $\pm$ 0.02	-2.33 $\pm$ 0.03	94.93 $\pm$ 0.28	18.41 $\pm$ 1.96
<i>Tristaniopsis laurina</i>	4	-1.84 $\pm$ 0.11	-2.16 $\pm$ 0.06	86.43 $\pm$ 2.43	9.32 $\pm$ 2.64
<i>Xanthostemon chrysanthus</i>	1	-1.20	-1.34	94.21	7.98
<i>Xanthostemon paradoxus</i>	1	-1.29	-1.37	93.85	14.81

2 Supplementary Figures

SUPPLEMENTARY FIGURE S1 | Air temperature (°C) inside the glasshouse during the water deficit phase (black line) and heatwave phase (red line) of the HIE experiment on an austral summer day (14 February 2018). Daily mean temperature was 27 °C to represent summer conditions in southeastern Australia, with a diurnal range from 21 to 34 °C and the maximum temperature spanning six hours at midday (12:00–18:00). Mean heatwave temperature was 35 °C, with a diurnal range of 30–41 °C and the maximum temperature spanning two hours at midday (12:00–14:00).

SUPPLEMENTARY FIGURE S2 | (A) The flat base of a control pot used with drip irrigation. **(B)** The flat base of a drought pot containing four large 4.3-cm diameter circles, which ensured adequate contact area between the soil at the bottom of the pot and the foam surface for capillary irrigation. **(C)** A 23-cm column of commercial porous foam (lower left, Oasis IDEAL Floral Foam Maxlife brick; Smithers-Oasis, Kent, OH, USA) fitted with fine nylon mesh (20- μ m, Allied Filter Fabrics, Berkeley Vale, NSW). Potted plants are placed on top of foam (see **FIGURE 1**). **(D)** Detail of the foam surface rewetted after two rounds of trial experiments. Surface wetting capacity is still largely retained, thus allowing reuse for new drought experiments. **(E)** Detail of the root barrier after a pot was left to overgrow on the foam surface. The nylon mesh allowed exchange of air and water but prevented root passage into the foam.

SUPPLEMENTARY FIGURE S3 | The soil moisture characteristic curve for the potting mix used in the glasshouse experiments. Soil volumetric water content (VWC) at field capacity ($\Psi_{\text{soil}} = -0.01$ MPa) is ~35%, whereas soil VWC at permanent wilting point ($\Psi_{\text{soil}} = -1.5$ MPa) is 14%.
