

SUPPLEMENTAL DATA

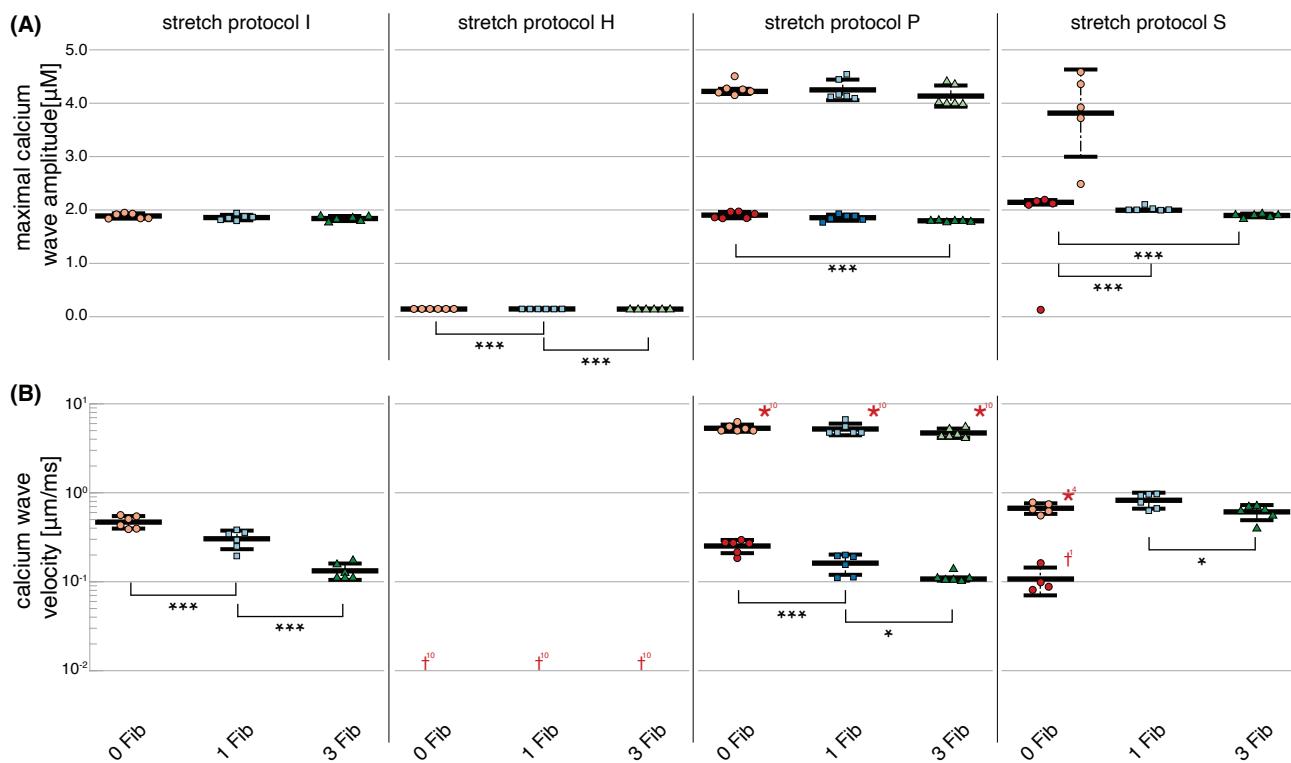

Figure 1. Maximal calcium wave amplitude and calcium wave velocity for simulations of 6 coupled cardiomyocytes. (A) For all stretch patterns but H (from left to right: control, S, and P) the maximal calcium wave amplitude significantly ($p < 0.01$) decreased the more fibroblasts were coupled to the multi-cellular string (control red data points, 1 coupled fibroblast blue data points, and 3 coupled fibroblasts green data points; the data points in light colors specify the first spontaneous event and dark colors are used for the following spontaneous event.) (B) The wave velocity significantly ($p < 0.01$) decreased for all stretch patterns from no coupled fibroblast to 3 coupled fibroblasts.
