

Supplementary data

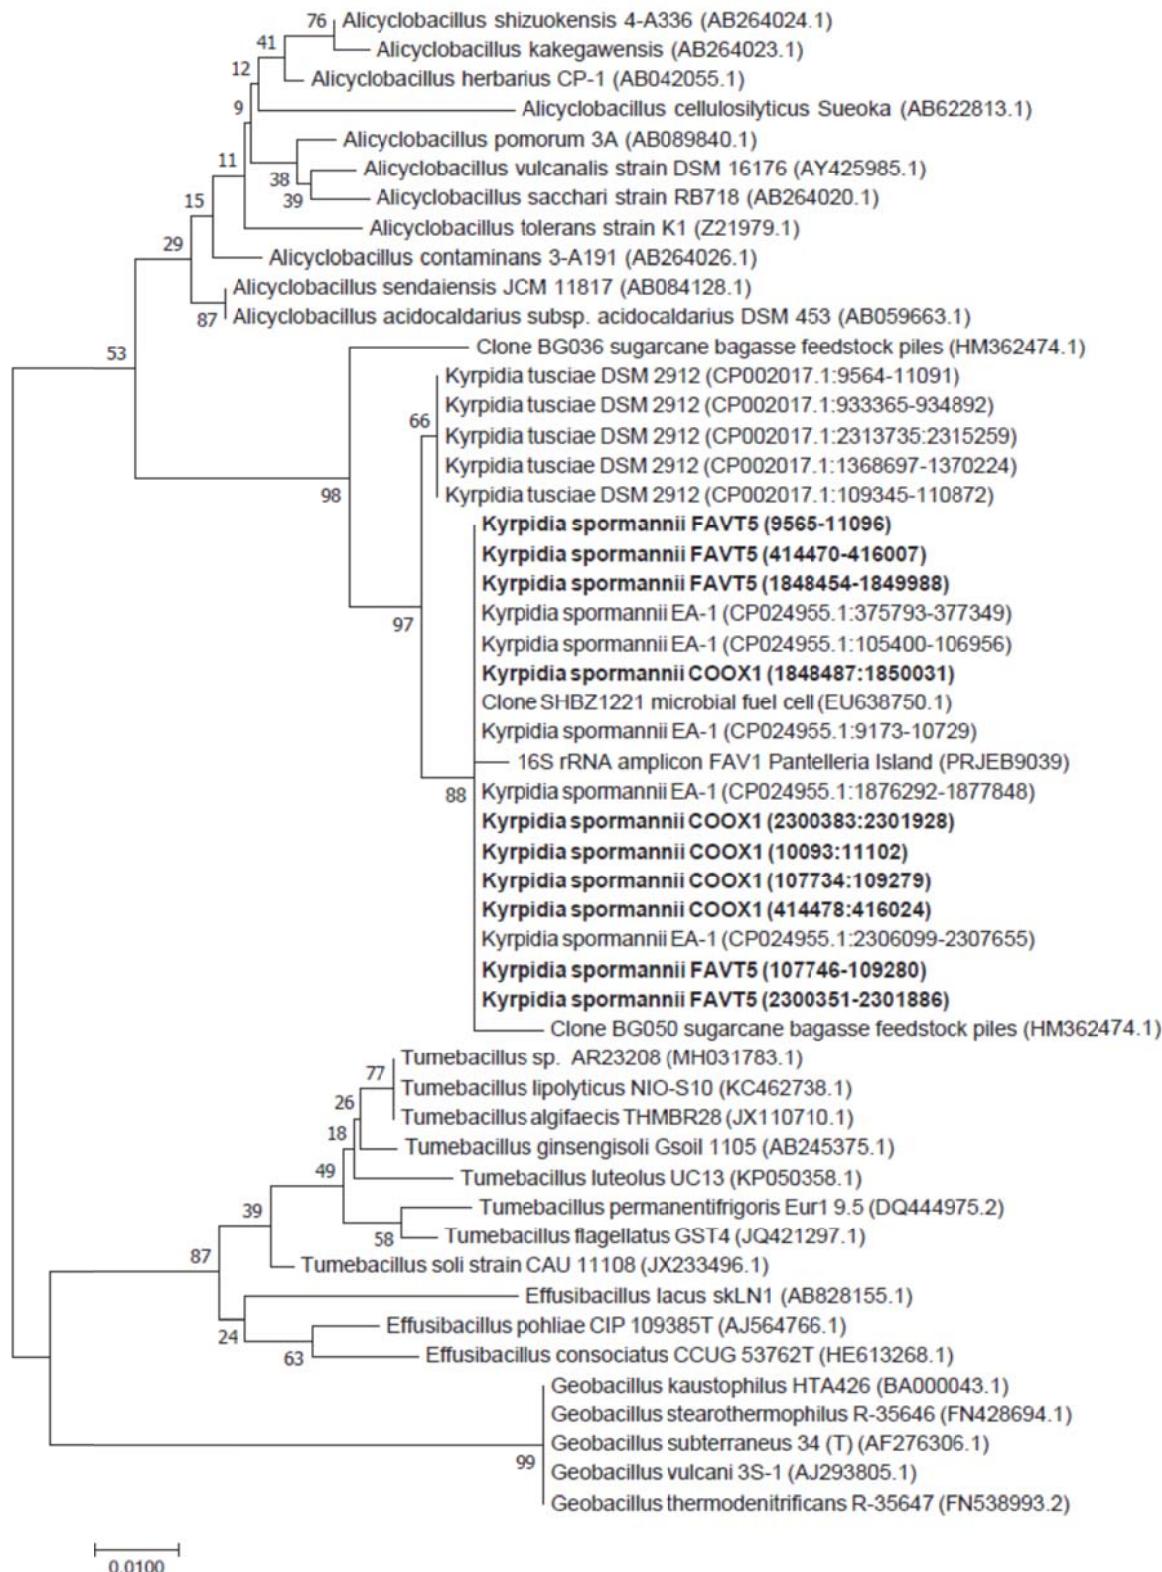

Figure S1: Phylogenetic tree of *Kyridia spormannii* strain FAVT5, *Kyridia spormannii* strain COOX1 and its relatives based on the 16S rRNA gene sequences. The tree was constructed using the Maximum Likelihood method based on the Tamura-Nei model (Tamura and Nei, 1993). Bootstrap percentage values (1000 replicates) are given at each node and the analysis was performed using MEGA7 (Kumar et al., 2016).

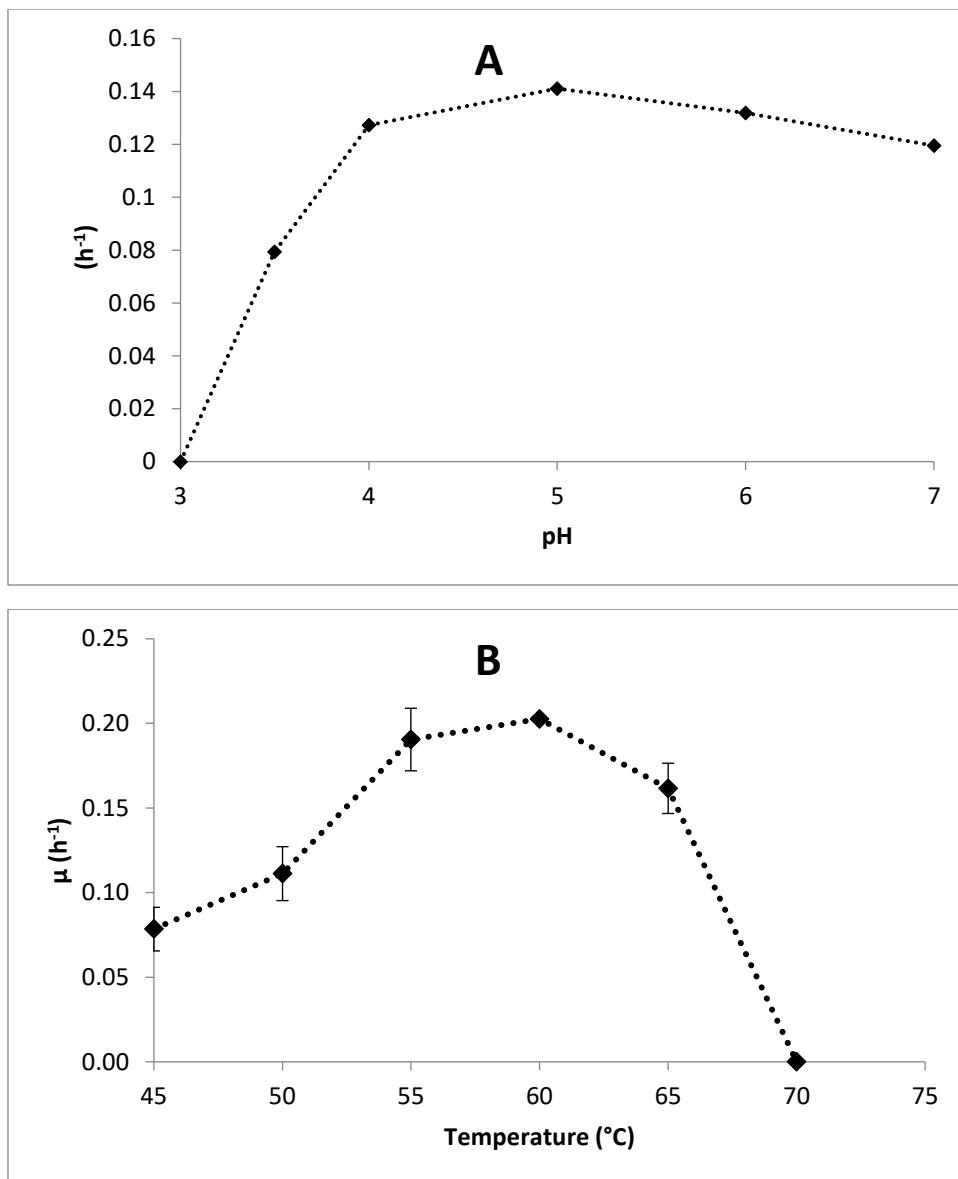

Figure S2. Growth rate of *Kyridia spormannii* FAVT5 at **A.** different pH at 50 °C and **B.** different temperature at pH 5.0.

Figure S3: Phase contrast microscopy of a stationary phase spore-forming cell of *Kyridia spormannii* FAVT5.

Table S1: Similarities of 16S rRNA genes between the strains *Kyridia spormannii* FAVT5, *Kyridia spormannii* COOX1, *Kyridia spormannii* EA-1 and *Kyridia tusciae*.

	Cytochrome C-type biogenesis protein	KFAV_v1_2899	Escherichia coli K12 (POABM9, 34.78%)	

^a *K. Spormannii* FAVTS protein identifier

^b Organism with highest scoring BLAST hit to *K. Spormannii* FAVTS protein in SwissProt database. In parentheses: SwissProt accession number of best hit, amino acid identity.

^c Organism with highest scoring BLAST hit to *K. Spormannii* FAVTS protein in TrEMBL database. In parentheses: TrEMBL accession number of best hit, amino acid identity.
