

Supplementary Figure 1: Clinical nodal and subcenters

Supplementary Figure1: Geographical map of India showing distribution of nodal and subcenters for patient recruitment and bio specimen collection.

Please do the following to reflect our study has a broad Indian representation which is indeed the case.. Highlight nodal centre "states" with the same color.. Highlight states which have not been captured directly, but do see patients either at nodal centres or sub-nodal centres... Use additional color to capture those states... I think with this approach, we will map whole India... Kindly show me the figure again before submission. For example, PGI does cover Pb, Harayana, Himachal and J&K.
