

Fig. S3 Effects of multidirectional changes in *sgg* expression in motor (A) and dopaminergic (B) neurons on the mean lifespan of males. Control and Strong knockdown (KD); Control and Weak KD; Control and Dominant negative (DN) effect; Control and Moderate overexpression (OE); Control and Strong OE denote hybrid genotypes obtained as a result of crossing 1) $y^1 v^1$; $P\{y^{+t7.7}=CaryP\}attP40$ and $y^1 sc^* v^1$; $P\{y^{+t7.7} v^{+t1.8}=TriP.
