

Supplementary Figure 2

Supplementary figure 2: Ca^{2+} responses in non-capacitated and capacitated mouse sperm. **(a)** Ca^{2+} responses evoked by mixing with 2 μM ionomycin in non-capacitated and capacitated sperm; average \pm 95 % confidence interval ($n \geq 18$) **(b)** Ca^{2+} responses evoked by mixing with 1 ZP/ μl , K8.6 or 2 μM ionomycin in non-capacitated and capacitated sperm; individual data points and mean \pm SD ($n \geq 18$).
