1.1 Supplementary Figures

Supplementary Figure 1. Gating strategy to identify murine CLL T-cell subsets in immunophenotyping analysis. Singlet viable CD3⁺ cells were gated on CD4⁺ and CD8⁺. CD4⁺ cells were then gated on CD25^{hi} CD127^{lo} cells to identify Tregs. CD44⁺ cells were gated to identify antigen-experienced T-cell fractions. Of the CD44⁺ cells, PD-1⁺ and LAG-3⁺ expressing cells were gated to identify exhausted T cells.

Supplementary Figure 2. CLL immunophenotyping analysis in spleen tissue. (A-J) CLL burden and T-cell subset distribution was determined by flow cytometry analysis in spleen tissue in a cohort of mice sacrificed at Week 7. CLL B cells were gated as CD3⁻ CD19⁺ B220^{LO} IgM^{HI} CD5⁺ cells. Total B cells were gated as CD3⁻ CD19⁺ B220⁺ cells. T cell gating was performed identical to the strategy shown in Supplemental Figure 1. n=5-6 per group. Graphs display mean + SD. *p<0.05, **p<0.005, ***p<0.005. ns: not significant.

Supplementary Figure 3. Representative flow cytometry plots showing (A) Percentage of CD44⁺ cells in peripheral blood samples from each experimental group and (B) PD-1 and LAG-3 expression on CD44⁺ cells gated in A. (C-F) Mice with similar tumor burden from the 10-week time point represented in Figure 1B were compared, n=5-6 mice per group. CLL burden all groups range 49-62.8%, mean 57.8%, SD 3.91%. Graphs display mean + SD. *p<0.05, **p<0.005, ***p<0.005. ns: not significant.

B

Supplementary Figure 4. Representative histograms showing expression of antigen presentation, co-stimulatory/co-inhibitory molecules on the surface of (A) OSU-CLL cell line and (B) previously frozen primary CLL patient B cells obtained from peripheral blood mononuclear cells. OSU-CLL was gated on singlet viable cells. CLL patient B cells were gated on singlet, viable, CD19⁺ CD20⁺ CD5⁺ cells.

Supplementary Figure 5. Xshift analysis (A) Tumor burden analysis in splenocytes. Graphs display mean + SD. * $p < 0.05$, ** $p < 0.005$, *** $p < 0.005$. $n = 8$ mice per group. (B) Quantification of populations expressing cytotoxic markers outlined in Figure 6A.

Supplementary Figure 6. tSNE plot showing expression of each marker in the CD8⁺ population. Heat map below each plot shows the level of expression where blue = low and red = high.
