

Supplemental Figure 7. Endodermis- and epidermis-specific *ESV1* lines express similar levels of transgenic *ESV1* mRNA.

Three-day-old dark-grown transgenic seedlings (*SCRp:ESV1/esv1-2*, *ML1p:ESV1/esv1-2*) were used for mRNA expression analysis. *SCRp:ESV1/esv1-2*: transgenic plants expressing *ESV1* under the endodermis-specific *SCR* promoter in the *esv1-2* mutant background, *ML1p:ESV1/esv1-2*: transgenic plants expressing *ESV1* under the epidermis-specific *ML1* promoter in the *esv1-2* mutant background. ns: non-significant ($p < 0.05$, Student's t-test), Error bars=SEM ($n=3$ biological replicates).
