

Figure S1: *Salmonella enterica* virulence in *Galleria mellonella*.

A. *Galleria mellonella* larvae were injected with 10 μ l of a solution containing 10^4 or 10^5 *Salmonella* cells, heat inactivated *Salmonella* (HI) (10^4), *Escherichia coli* K12 (10^4) or PBS. Kaplan-Meier plots show larval survival over 72 hours. Experiments were repeated three times using 20 larvae per group. The survival curves were compared by log-rank. *** $P \leq 0.001$ (Mantel-Cox test). **B.** *Galleria* larvae were injected with 10^4 *Salmonella* cells. 6, 12, 18 and 24 hours post-injection, the hemolymph was removed from 24 larvae for bacterial counts on LB agar plates. The grey dots indicate CFU counted from alive larvae and the black bars represent the median value. The red triangles indicate CFU from killed larvae and the red bars represent the median value.

Figure S2: Growth of three *Salmonella enterica* strains under microaerobic conditions. *Salmonella enterica* wild-type (black circles), the HpxF (green circles) and the $\Delta sodA \Delta sodB$ (red circles) cells were grown in LB medium in microaerobic conditions during 16 hours. The cells were then diluted in LB medium to an OD₆₀₀ of 0.05, and microaerobic growth was monitored at 600 nm without shaking at 37°C.

Table S1. List of strains and plasmids used in this study.

Strain	Genotype and description	Source
<i>Salmonella enterica</i> 14028	<i>Salmonella enterica</i> serovar Typhimurium 14028 (wild-type)	Laboratory collection
$\Delta sodA$	14028 $\Delta sodA::Cm^r$	This study
$\Delta sodB$	14028 $\Delta sodB::Cm^r$	This study
$\Delta sodA \Delta sodB$	14028 $\Delta sodA \Delta sodB::Cm^r$	This study
$\Delta sodCI$	14028 $\Delta sodCI::Cm^r$	(Uzzau et al., 2002)
$\Delta sodCII$	14028 $\Delta sodCII::Kan^r$	(Uzzau et al., 2002)
$\Delta sodCI \Delta sodCII$	14028 $\Delta sodCI::Cm^r \Delta sodCII::Kan^r$	This study
$\Delta katE \Delta katG \Delta katN$	14028 $\Delta katE \Delta katG \Delta katN::Kan^r$	(Hébrard et al., 2009)
$\Delta ahpC \Delta tsaA$	14028 $\Delta ahpCF \Delta tsaA::Kan^r$	(Hébrard et al., 2009)
HpxF	14028 $\Delta katE \Delta katG \Delta katN \Delta ahpCF::Kan^r \Delta tsaA::Cm^r$	(Hébrard et al., 2009)
$\Delta oxyR$	14028 $\Delta oxyR::Tn10$ (Tet ^r)	(Elgrably-Weiss et al., 2002)
$\Delta hypT$	14028 $\Delta hypT::Cm^r$	This study
$\Delta soxR$	14028 $\Delta soxR::Cm^r$	This study
<i>Escherichia coli</i> K-12	<i>Escherichia coli</i> K-12 MG1655	Laboratory collection

Plasmids		
<i>PahpC-gfp</i>	pFPV25 derivative carrying the <i>ahpC</i> promoter - Ap ^r	(Aussel et al., 2011)
<i>PsoxS-gfp</i>	pFPV25 derivative carrying the <i>soxS</i> promoter - Ap ^r	This study
<i>PrpsM-mCherry</i>	pGBM2 derivative carrying the <i>rpsM</i> promoter - Kan ^r	This study
