2637 cases at the time of data analysis

Reasons for exclusion:
- 32 cases: time of symptom onset later than the time of IVT
- 67 cases: time of groin puncture prior to the time of IVT
- 90 cases: time of symptom onset later than the time of groin puncture
- 69 cases: time of flow restoration prior to time of groin puncture
- 3 cases: labeled as not being treated with IVT, but with a timepoint IVT entry
- 22 cases: no entry in the IVT treatment field
- 25 cases: no entry on the on-site IVT treatment field
- 8 cases: labeled as IVT treatment on site, but with time of IVT prior to admission time
- 123 cases: treatment with full dose of IVT had not been completed
- 33 cases: IVT had been stopped before EVT
- 38 cases: TICI ≥ 2b on first angiogram
- 121 cases: non-ICA or MCA LVOS

2006 cases

1125 non-mothership cases

881 cases

486 cases with bridging IVT before EVT

395 cases with EVT alone
