

	<b>All PC-AKI patients (N=29)</b>	<b>PC-AKI patients surviving the acute hospital stay (N=22)</b>
Pneumonia/sepsis, N (%)	10 (35)	8 (36)
Acute or decompensated chronic heart failure, N (%)	6 (11)	4 (18)
Acute urinary tract infection, N (%)	1 (3)	1 (5)
Acute hypertensive crisis, N (%)	1 (3)	1 (5)
Ongoing chemotherapy with vinorelbine (for alveolar cellular carcinoma), N (%)	1 (3)	1 (5)
Cardiopulmonary reanimation, catecholamine therapy, N (%)	1 (3)	-
No identifiable competing trigger for PC-AKI, N (%)	9 (31)	7 (32)

**Supplementary Table 3: Clinical complications and circumstances that may represent a risk for post-contrast acute kidney injury beyond the possibility of a causal relationship with contrast dye**

PC-AKI, post-contrast acute kidney injury.
