

7. Supplementary Material

Information on missing data

One week after treatment one patient did not complete the Y-BOCS interview, and four did not report GAD7 or PHQ9. Three months after treatment one patient did not attend the Y-BOCS interview, two patients were missing GAD-7, and three patients were missing PHQ-9. One healthy control was missing the GAD7 and PHQ9 at baseline and after one week, while two healthy controls were missing the GAD7 and PHQ9 after three months.
