Supplementary Figure S1 The malformation and mortality of larva treated with various exposure concentrations VPA. (A) The malformation of WT larva treated with two different exposure paradigms (3 - 7 dpf and 4 - 8dpf) of VPA. 0 μ M: 3 - 7 dpf (0%, 0/39), 4 - 8dpf (1.04%, 1/96). 5 μ M: 3 - 7 dpf (4.35%, 2/46), 4 - 8dpf (0, 0/96). 10 μ M: 3 - 7 dpf (15%, 6/40), 4 - 8dpf (1.04%, 1/96). The malformation including distended abdominal and thoracic regions, lordosis, yolk sac edema and pericardial edema. (B-G) The malformation and mortality of larva treated with various exposure concentrations VPA (5 μ M, 20 μ M and 50 μ M) from 4 dpf to 8 dpf. (B) Distended abdominal and thoracic regions (red arrow). (C) Lordosis (blue arrow). (D) Yolk sac edema (yellow arrow). (E) Pericardial edema (green arrow). (F) The phenotypic deformities of larva treated with VPA, 0 μ M-WT (1.04%, 1/96), 0 μ M-*shank3ab*^{-/-} (0.82%, 1/122), 5 μ M-WT (0, 0/96), 5 μ M-*shank3ab*^{-/-} (1.14%, 1/88), 20 μ M-WT (4.26%, 4/94), 20 μ M-*shank3ab*^{-/-} (15.56%, 14/90), 50 μ M-WT (19.79%, 19/96), 50 μ M-*shank3ab*^{-/-} (4.17%, 4/96). (G) The mortality of larva treated with VPA, 0 μ M-WT (0%, 0/96), 0 μ M-*shank3ab*^{-/-} (0%, 0/122), 5 μ M-WT (0, 0/96), 5 μ M-*shank3ab*^{-/-} (0%, 0/88), 20 μ M-WT (1.11%, 1/94), 20 μ M-*shank3ab*^{-/-} (2.13%, 2/90), 50 μ M-WT (1.04%, 1/96), 50 μ M-*shank3ab*^{-/-} (12.5%, 12/96).

Supplementary Figure S2 The effects of fear/danger responses (A), velocity (B) on adult (3.5 mpf) *shank3ab*^{-/-} zebrafish, and relative mRNA expression level of *hdacs* (C), *gria* (D) and *grin* (E) on adult (4.5 mpf) *shank3ab*^{-/-} zebrafish under VPA exposure. (A) WT, n=11; WT-VPA, n=9; *shank3ab*^{-/-}, n=13; *shank3ab*^{-/-}-VPA, n=12. Data are shown as mean ± SEM. Statistical analyses: One-way ANOVA with Bonferroni correction for multiple testing. * $P < 0.05$, *** $P < 0.001$. (B) WT, n=12; WT-VPA, n=10; *shank3ab*^{-/-}, n=12; *shank3ab*^{-/-}-VPA, n=12. Data are shown as mean ± SEM. Statistical analyses: One-way ANOVA with Bonferroni correction for multiple testing. *** $P < 0.001$, **** $P < 0.0001$. (C-E) The relative mRNA expression level of associated genes at 4.5 mpf, normalized to WT. Each group n=3. Data are shown as mean ± SEM. Statistical analyses: One-way ANOVA with LSD correction for multiple testing.

Supplementary Figure S3 Hematoxylin and eosin (HE) staining of zebrafish brain (4 mpf) between WT and shank3 KO group.

Supplementary Table S2. The malformation and mortality of larva treated with various exposure concentrations romidepsin (RMD)

	WT	WT+0.1μM RMD	WT+0.05μM RMD	<i>shank3ab</i> ^{-/-}	<i>shank3ab</i> ^{-/-} +0.1μM RMD	<i>shank3ab</i> ^{-/-} +0.05μM RMD
Mortality	0%(0/81)	0%(0/76)	0%(0/79)	0%(0/18)	0%(0/39)	0%(0/38)
Lordosis	0%(0/81)	0%(0/76)	1.3%(1/79)	0%(0/18)	0%(0/39)	0%(0/38)
Pericardial edema	0%(0/81)	0%(0/76)	0%(0/41)	0%(0/18)	0%(0/39)	0%(0/38)

Supplementary Figure S4. Improved ASD core symptoms in *shank3*-deficient zebrafish upon romidepsin (RMD) treatment. (A) Schematic overview of the protocol used for the romidepsin exposure period, the evaluation of behavioral tests at juvenile (2 mpf). (B) Social preference index (distance ratio) of social test on juvenile zebrafish treated by 0.1 μM RMD, WT, n=11; WT-0.1 μM RMD, n=35; *shank3ab*^{-/-}, n=11; *shank3ab*^{-/-}-0.1 μM RMD, n =32. (C) Social preference index (distance ratio) of social test on juvenile zebrafish treated by 0.05 μM RMD, WT, n=11; WT-0.05 μM RMD, n=31; *shank3ab*^{-/-}, n=111; *shank3ab*^{-/-}-0.05 μM RMD, n =31. One-way ANOVA with LSD correction for multiple testing. Data are presented as mean ± SEM; * $P < 0.05$, ** $P < 0.01$.

Supplementary methods

Romidepsin administration

Romidepsin (Selleckchem) was prepared by dissolving it in DMSO to make stock solutions (100 μM) and diluting it with egg water before administration (DMSO concentration of the working solutions: 0.1% and 0.05%). Wild-type or *shank3ab*^{-/-} larvae were exposed to blue egg water with or without 0.05 or 0.1 μM romidepsin from 4 dpf to 8 dpf. At 8 dpf, larvae were observed under a microscope for mortality and Lordosis, and then was pipetted into fresh paramecium liquid, and raised to 2 months old (juvenile). The juveniles were examined for 30 minutes using the 1 vs 6 social preference assay to evaluate the effects of romidepsin on autism-like behaviors.
