## 1 Supplementary Figures and Tables

### 1.1 Supplementary Figures

**Figure S1.** The arrow shows a zone of the fouled membrane where the polysulfone material is compressed and hardly visible.

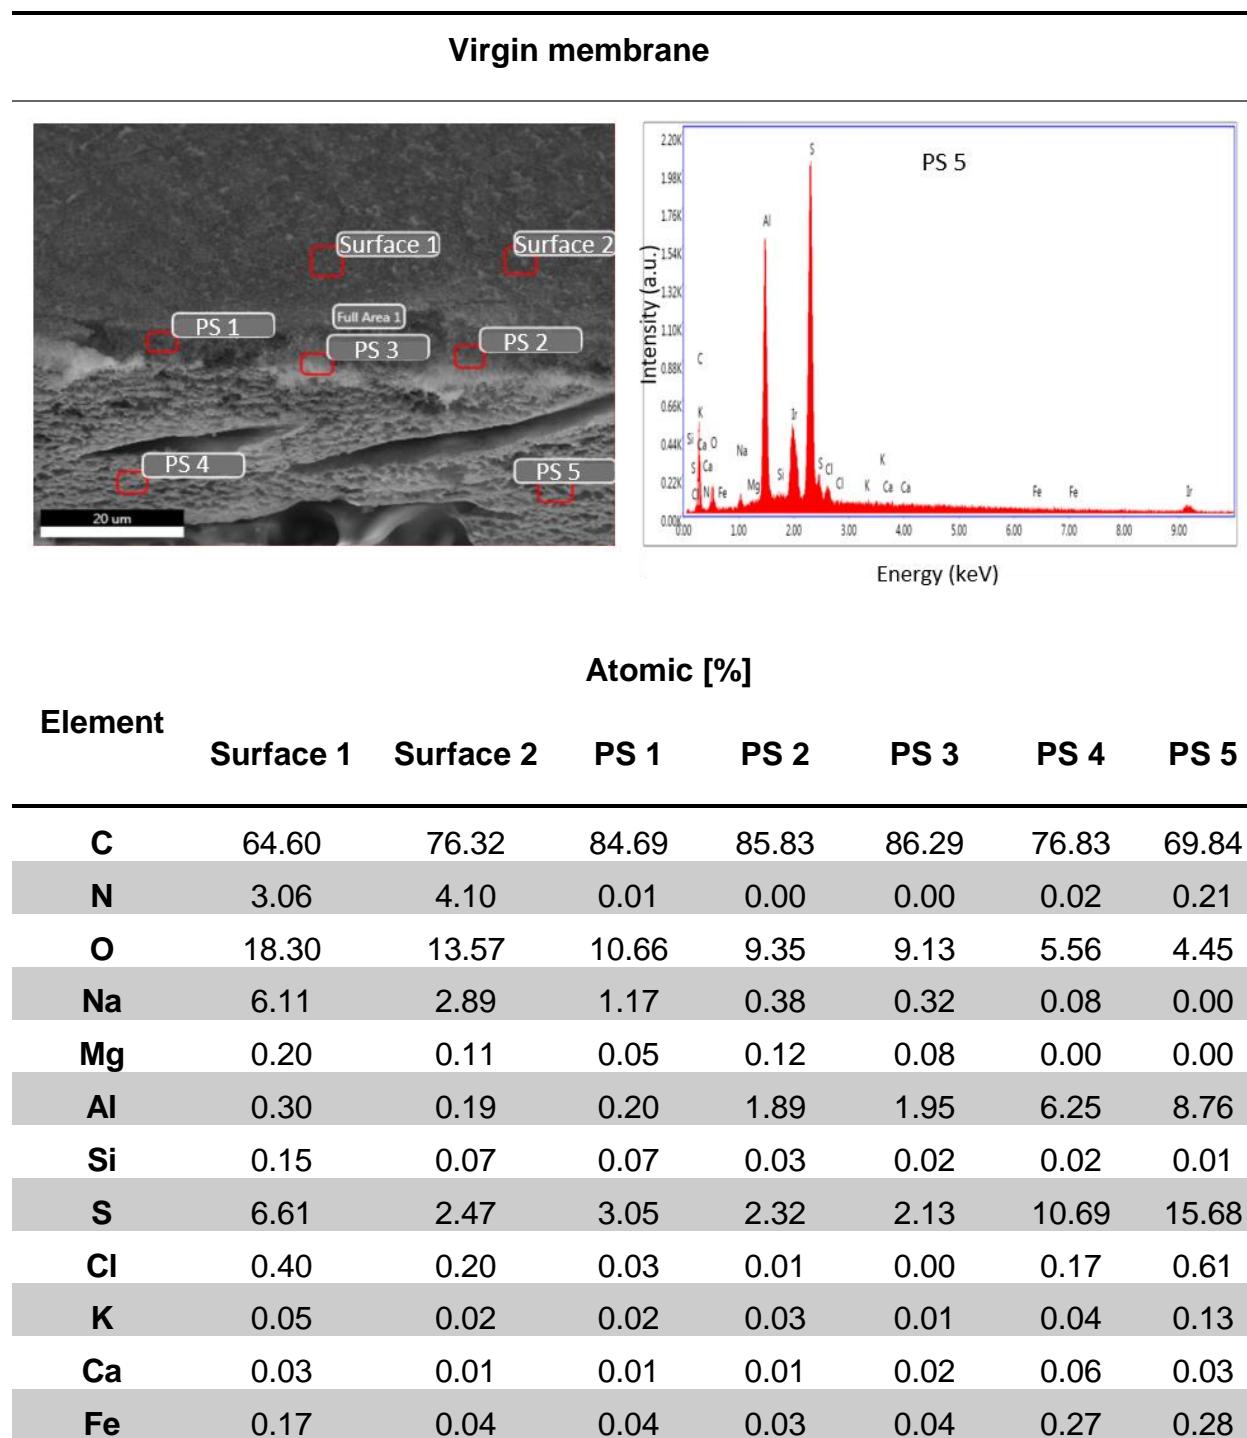

**Figure S2.** Two structures (i.e., morphologies) of polysulfone on the fouled membrane.

## 1.2 Supplementary Tables

**Table S1.** Feed seawater parameters.

**Table S2.** Elemental composition of a virgin membrane. Data corresponds to various locations of the scanning electron image. Surface 1 and Surface 2 correspond to the polyamide membrane surface. Based on the sulfur content, and on the physical appearance, two distinct polysulfone structures or layers are distinguished. Polysulfone layer having a low sulfur content (PS 1, PS 2, and PS 3), and polysulfone layer having a high sulfur content (PS 4 and PS 5).

**Table S3.** Elemental composition of the fouling cake layer at the membrane inlet. Data corresponds to various locations of the cake layer as specified in the scanning electron image. Two locations of the polysulfone (PS1 and PS2) layer were also analyzed for comparison. The intensity vs energy plot for location cake 1 is shown as example of the results output.
