Table 6: Predictions from CeCILE for the video of the sham irradiated cells. Start X, Start Y, End X, and End Y indicate the coordinates of the boxes in the images.

Table 7: Ground truth predictions for the video of the 4 Gy irradiated cells. Start X, Start Y, End X, and End Y indicate the coordinates of the boxes in the images.

Table 8: Ground truth predictions from the video of the sham irradiated cells. Start X, Start Y, End X, and End Y indicate the coordinates of the boxes in the images.

Table 9: For validation of the performance of CeCILE on the videos of the study, the $\overline{AP}(class)$-scores were calculated for each class by comparing the predictions of CeCILE for the here listed frames on two videos with the ground truth. The mAP is then the mean of the $\overline{AP}(class)$-scores and also listed in this table for each frame. In frames where classes are missing in the ground truth, these classes are indicated with the entry "no object".

Table 10: For measuring the generalization, CeCILE was retrained by excluding the groundtruth data of this study for the dataset CeCILE was trained on. Here, the mean $\overline{AP}(class)$-scores for the four classes are listed for 11 frames of each video

and the mAP-scores of these frames, which the unknowing CeCILE achieved. In frames, where classes are missing in the ground truth, these classes are indicated with the entry "no object".
