

Supplementary Figure 2 Phylogenetic relationship of VcSBP proteins with the SBPs in other plant species. A maximum likelihood tree was generated with the MEGA X software using the putative amino acid sequences of 101 SBP proteins, which were clustered into eight groups (G1-G6). The SBP proteins in the same species are represented with the same symbol: blue check, *Vaccinium corymbosum*; orange circle, *Vitis vinifera*; yellow square, *Malus domestica*; pink star, *Solanum lycopersicum*; grey triangle, *Arabidopsis thaliana*.
